## REPORT.

---

*To the Honorable JAMES H. BUDD, Governor of the State of California:*

In conformity with law, the Board of Fish Commissioners of the State of California has the honor to submit its Fourteenth Biennial Report, being the record of its work from September 1, 1894, to September 1, 1896.

Hon. H. L. Macneil was forced by ill health to present to you his resignation in January, 1895, and Mr. H. F. Emeric was named by you, February 8, 1895, as his successor.

On February 25, 1895, Hon. J. D. Redding presented to you his resignation, which was accepted, and Mr. J. M. Morrison was appointed to succeed him on March 12, 1895.

Thereupon the Board met and elected H. F. Emeric president, and decided to move the office of the Commission to more commodious quarters, where its business could be more easily transacted. A suitable office was selected at No. 78, Flood Building, and cabinets procured for the library and specimens of native and introduced fish and birds. This collection, while yet small, is rapidly increasing and will furnish an object-lesson, valuable alike to fishermen, marketmen, and sportsmen. Through the generosity of the friends of the Commission suitable furnishings were presented and loaned, so that the office was fitted up in a very complete manner, and without expense to the State.

Meetings of the Board have been regularly held upon the second Monday of every month, and at such other times as the exigencies of the work demanded. A majority of the Board has been present at every meeting. Complete minutes of the meetings are on file in the office.

The work of this Commission is steadily increasing, and its field for usefulness so rapidly extending that much time is required to plan the work and properly attend to the various questions which are constantly demanding attention. We have followed the policy laid down by the first Board and adopted by every succeeding Board, both because the laws governing this Commission require us to do so, and because our greatest field of usefulness lies in that direction. We are greatly pleased to be able to present to you, in the following pages, the splendid results of this policy, and to demonstrate conclusively that the care and supervision of the commercial fisheries is worthy of the best efforts of this Board and will make returns a hundredfold to the people of the State.

We quote from "A Review of the History and Results of the Attempts

to Acclimatize Fish and other Water Animals in the Pacific States," by Dr. H. M. Smith, of the U. S. Commission of Fish and Fisheries, a gentleman who has made extended investigations throughout the State and thoroughly examined all of our waters, making investigations of the various branches of our commercial fisheries :

"The zealous efforts of the Fish Commissioners of California to increase the quantity and variety of food and game fishes of the State deserve special recognition. For more than twenty-five years the energies of the Commission have been almost constantly directed to the acclimatization of desirable fishes inhabiting the waters of the Eastern States. Their remarkable success when acting on their own behalf and in conjunction with the New York Commission and the U. S. Fish Commission entitles them to the great credit and praise which they have received both from the inhabitants of California and from the people of other States and foreign countries." (p. 380.)

This quotation is not made with the idea of self-congratulation or laudation, but to show that the policy laid down by the State's first Board of Fish Commissioners is the policy which receives the highest commendation from the men who are the best posted in the value of this work, and thoroughly able to express an opinion.

It has also been our aim, so far as was in our power, to protect and care for the game and game-fish interests of the State, believing that they are of great importance; and, as the following pages will show, demand more attention and better protection than has heretofore obtained. We have, during the last two years, by watching the chief market centers and sending men into districts where violations were reported, made many arrests and put a stop to much illegal work.

We have caused certain statistics pertaining to our fisheries to be compiled. They are included in this report, and give much valuable information regarding the catch of our commercial fishes. We also present statistics, which will be found of interest, showing the value and amount of game handled in San Francisco and Los Angeles markets, during the season 1895-96.

We have increased our fish hatcheries by the addition of the Battle Creek, Tallac, and Wawona stations, and are now much better equipped than ever before, and better able to carry on the work of re-stocking and increasing the output of our streams and lakes.

The splendid location of the Battle Creek hatchery makes it possible to take and hatch an unlimited number of salmon eggs; and, although obliged to stop last fall in the middle of the work for want of a place to eye the eggs, we have placed to our credit in one year the largest plant of salmon fry ever made by the State in any previous four years—14,283,180.

The location of the Wawona hatchery fills a long-felt want, and makes it possible to reach the magnificent waters in and about the Yosemite National Park without the long, tiresome, and unprofitable trip from any one of our other hatcheries.

We have granted all applications for fish for public waters in so far as they were suitable for the varieties asked for; but so great a demand has been made upon us in this direction that the supply has not been equal to it, even with the increased output never before equaled.

Total Output For—	1895.	1896.
Eggs.....	383,000	1,141,000
Fry.....	7,391,700	13,351,833
Adults and yearlings.....	1,239	5,209
Totals.....	7,775,939	19,498,042
Total output for two years.....	27,273,981.	

The remarkable success of the plant of Eastern fresh-water fishes in Lake Cuyamaca, San Diego County, in 1891, would indicate that these varieties, which are held in high esteem as food and game fishes throughout the East, as well as others introduced here, will find congenial waters in our State, thereby adding to our already large variety of fishes, and making our waters more productive.

Efforts have been made to introduce desirable mollusks and crustaceans from one part of the State to another, with the hope of increasing the range of these species, and consequently the supply.

The sawdust question in the Truckee River has demanded attention, and we are glad to report that this stream, as well as others, has been kept free from pollution.

The ladders upon dams have been frequently inspected, and kept in repair. Such arrangements have been made that but few, if any, dams are unprovided with ladders at the present time.

The policy of retaining the trained and capable men who have been employed in the work for many years, has enabled the Commission's work to proceed without interruption, and has been the means of saving many dollars to the State. We believe that this Commission should be operated under civil service rules, as it will incite the men employed to more careful and better work, knowing that they will be retained so long as they are faithful and attentive.

We have designed to conduct the business of the Commission on business lines, and have, we believe, made the best possible use of the money appropriated. The amount has many times seemed inadequate, and we have been obliged to temporarily retire some of our men until such time as our finances would permit their re-instatement.

The resources and expenditures of this Commission have been as follows:

*Forty-sixth Fiscal Year.*

	Resources.	Disbursements.
Support and Maintenance of State Hatcheries—		
Appropriation .....	\$7,500 00	\$7,500 00
Restoration and Preservation of Fish—		
Balance on hand .....	150 00	
Appropriation .....	10,000 00	10,150 00
Fish Commission Fund—		
Balance on hand .....	1,379 24	
Receipts from licenses, fines, etc. ....	5,225 92	
Amount expended .....		4,737 72
Balance on hand .....		1,867 44
Totals .....	\$24,255 16	\$24,255 16

*Forty-seventh Fiscal Year.*

Support and Maintenance of State Hatcheries—		
Appropriation .....	\$7,500 00	\$7,500 00
Restoration and Preservation of Fish and Game—		
Appropriation .....	10,000 00	10,000 00
Fish Commission Fund—		
Balance on hand .....	1,867 44	
Receipts from licenses, etc. ....	5,671 90	
Amount expended .....		5,874 89
Balance on hand .....		1,664 45
Totals .....	\$25,039 34	\$25,039 34

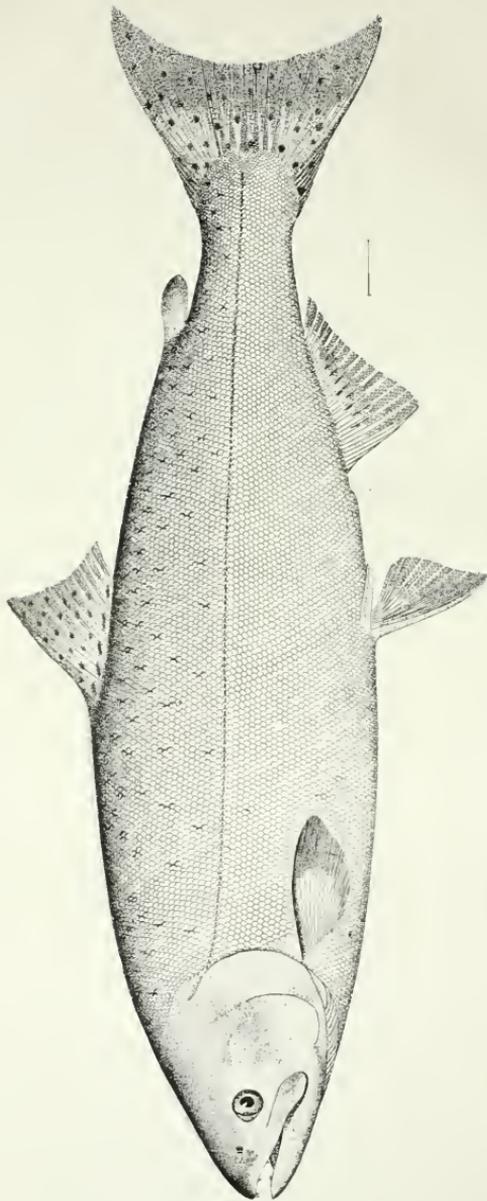

In the Appendix will be found a statement of all the bills passed by this Board and allowed by the Board of Examiners. This statement shows to whom and for what purpose the money was paid. Duplicates of all bills are on file in this office giving in detail the uses to which our funds have been put.

Having thus given a résumé of the work under our supervision, we invite your attention to the details which follow, as well as to many subjects and incidents connected with our fisheries, and to the other matters with which we have had to deal.

We are pleased to report that the increase in the fishery industry, shown in the Thirteenth Biennial Report of the COMMERCIAL FISHERIES. California Fish Commission, has continued during the last two years, although the fisherfolk have suffered in some measure, owing to the hard times which have affected every industry.

We regret our inability to present the actual increase. Our resources do not admit of a sufficiently thorough investigation of all its branches to enable us to make complete statistics. The U. S. Commission of Fish and Fisheries have not taken a complete census since 1892, but are now completing one for the year 1895. The results of the census of 1892 were embodied in the last report of the California Fish Commission.

QUINNAT SALMON.—*Onchorhynchus chouicha*.

Mr. W. A. Wilcox, of the U. S. Commission of Fish and Fisheries, in his treatise entitled "The Fisheries of the Pacific Coast," says:

"The growth of the industry of late years has been marked, and the near future will doubtless witness an advance in the relative position of California at the expense of several of the east-coast States. Considering the entire country, the rank of California as a fishing State is six; in the value of its products it is surpassed only by Massachusetts, Maryland, New York, New Jersey, and Virginia." (p. 147.)

We take the following totals from a table prepared by him, which show the products of the fisheries of California:

	Pounds.	Value.
1889.....	53,505,055	\$2,465,317
1890.....	53,330,194	2,592,826
1891.....	52,483,906	3,031,430
1892.....	57,838,466	3,022,991

That the fisheries of the State are constantly developing along broader lines is beyond question, and the fishermen and people generally are coming to appreciate the value of fostering this industry, and are urging the Commission to extend its investigation and its protecting power to branches which they never before deemed in need of protection, because of the seemingly limitless store from which the supply was being drawn.

If at any time there has been a question as to the needs and results of the artificial propagation of both fresh and salt water fishes, that time has passed, for it is no longer a supposition but an established fact that this work makes enormous returns for the money expended. The results of this work are everywhere apparent, and nowhere more so than in California, and the people generally are alive to the necessity and demand for it.

Dr. H. M. Smith, of the U. S. Commission of Fish and Fisheries, says, in his "Notes on a Reconnoissance of the Fisheries of the Pacific Coast of the United States in 1894":

"In no other region in the United States are the people more generally impressed with the beneficial results of artificial propagation and more ready to aid and approve any fish-cultural measures that are properly recommended. While the results of salmon culture have in some places been marked and are readily acknowledged by fishermen and others, this alone is not sufficient to account for the widespread advocacy of fish culture which exists among all classes and in all parts of the Pacific Coast. We must look further for the cause. There seems little reason to doubt that to the marvelous success of shad and striped bass acclimatization on the west coast must be attributed the firm belief in fish-cultural work that pervades all localities in which fish is an article of food or an object of capture. One or both of these new species are well known in almost every Pacific Coast settlement, and they are an enduring testimony to the influence of man over fish production." (p. 226.)

It has been the purpose of this Board to increase the pro-  
**SALMON.** ductiveness of the salmon fishery, which is our most im-  
 portant branch. Aided by the extended close season granted  
 by the last Legislature, we were enabled to plant in our waters a greater  
 number of young fish than ever before. The following table, showing

the yearly increase in the receipts of fish in the San Francisco markets, must be attributed to the planting of fry in former years:

*Salmon Received in the San Francisco Market.*

Month.	1893.	1894.	1895.	1896.
January .....	137,460	128,556	161,641	168,366
February .....	93,263	103,801	146,250	173,278
March .....	139,401	163,131	155,791	197,043
April .....	374,478	211,552	365,387	301,964
May .....	325,170	242,126	401,787	291,310
June .....	70,216	138,675	161,989	134,922
July .....	1,139,988	987,841	1,392,845	1,266,883
August .....	149,217	117,516	115,592	-----
September .....	575,609	576,991	447,094	-----
October .....	249,753	403,340	-----	-----
November .....	183,789	276,768	431,453	-----
December .....	155,090	192,153	326,474	-----
Totals .....	2,453,446	2,554,609	2,713,458	-----

While the yearly increase is not large, it shows a healthy growth, and establishes the fact that this fishery can, with proper protection and the re-stocking of our waters, be restored to its former splendid condition, when the annual catch amounted to ten millions of pounds instead of four.

It must be borne in mind that the success at Battle Creek station is due entirely to the extension of the close season. Until October was included in the close season, the salmon that had successfully passed the bays and lower river during the month of September were legally taken by the ton from their spawning-beds, or in the deep pools of the Sacramento River in Tehama and Shasta counties, though the fish were unfit for food and had not accomplished the purpose for which the State had guarded their ascent of the river. The addition of the month of October to the close season was timely and is of vital importance in the efforts of the Commission to restore the supply of salmon. The Board met with no opposition to its efforts to enforce the observance of the extended close season in the region of the upper Sacramento and in Humboldt County. This change meets with the approval of the people of those sections, as well as of the fish-dealers of the San Francisco market, all of whom have evinced a genuine interest in the efforts of the Commission to increase the run of our most valuable fish. In Del Norte County, however, the efforts of the Board to enforce this law were made abortive by the action of the local authorities, the Board of Supervisors assuming to make regulations in conflict with the State law, and the District Attorney instructing the Justices of the Peace to refuse to issue warrants, and refusing himself to prosecute arrested offenders. Our deputy was withdrawn and the matter was called to the attention of the Attorney-Gen-

eral. The people of that county will alone be the sufferers, since the fisheries there supply only the local demand.

For some reason the run of salmon in the Sacramento River in 1895 was affected (presumably from high temperature or a rise of water) so that, instead of being heaviest during the month of August, it was only well started when the season closed. This condition obtained in 1896, but in a more marked degree. The early or spring run of fish was also affected by some cause. The salmon appeared in considerable numbers in the river as early as January, and continued to come through February and March, in consequence of which the April run of fish did not show the decided increase of former years, though there was an increase in the total take for the first six months.

Owing to the varied run, the canneries did not pack as many SALMON salmon, as the following table will show. The figures for the CANNED. years previous to 1895, in all of the tables, were taken from the biennial report of the California Fish Commission for the years 1893-94:

*Salmon Pack of the Sacramento River.*

Year.	Pounds.	Cases.
1888.....	4,039,200	61,200
1890.....	1,618,471	25,065
1891.....	672,121	10,353
1892.....	170,425	2,281
1893.....	1,496,927	23,336
1894.....	1,940,009	28,463
1895.....	1,637,025	25,185
1896.....	870,155	13,387

It would be advantageous for the State to cause an investigation by trained scientists of the habits of the young salmon after reaching the river from the small creeks on their way to the sea. Such an investigation, combined with intelligent observations upon the fish-food to be found in our larger interior waters, might lead to information that would be of material help in the restoration of salmon and the development of other valuable food-fisheries. It would seem advisable, therefore, that the Legislature should make a small appropriation for such scientific investigation, placing the appropriation in the hands of the Board, or of Dr. David Starr Jordan, of Stanford University, who, as is well known, stands high as an authority on the habits of fishes.

The number of seals near the Seal Rocks, lying off Point Lobos, SEALS. City and County of San Francisco, has so greatly increased under the protection afforded them by an Act of Congress relating to the control and care of the rocks that they very seriously interfere with the fishermen who carry on their vocation in the Bay of San Francisco and its tributary waters. Many schools of fish seeking entrance to spawning-beds are scattered by these seals.

When the salmon come in from the open sea they are set upon, and many schools are broken up and driven back; and only when compelled by the demands of nature do they gather in sufficient numbers to force an entrance to the bays and lower rivers. Thus is the run of this valuable fish lessened and delayed. Their devastations do not cease here, as the seals follow in the wake of the fish, ascending as high as the waters of Suisun Bay and the lower Sacramento and San Joaquin rivers, where the principal fishing-grounds for salmon, striped bass, and shad are found. Not content with taking the number of fish they wish for food, which is considerable, they go along the nets biting and killing the fish, tossing them into the air, and playing with them. In this way they tear the nets; and very often becoming entangled in the meshes thereof, the net is completely destroyed.

It has been estimated that there are at the present time no less than two thousand seals resorting to the Seal Rocks; and, as it is said to require about sixty pounds of fish a day to supply the needs of a full-grown individual, it is easily seen that they are interfering seriously with the fishing industry of this State.

We fully appreciate the great attraction they are to the people of this city and State, as well as to the great number of visitors who annually come here; but, as the servants of the people of this State, charged with the duty of protecting their fisheries, we deemed it wise to call the attention of the proper officials to the above referred to Act, wherein the right to at all times control and limit or diminish the number of the seals resorting to said rocks, so as to protect the fisheries and fishing industries, is reserved to the United States. We communicated with the U. S. Commissioner of Fish and Fisheries, who referred the matter to the Secretary of the Interior, with the recommendation that this matter be given prompt attention.

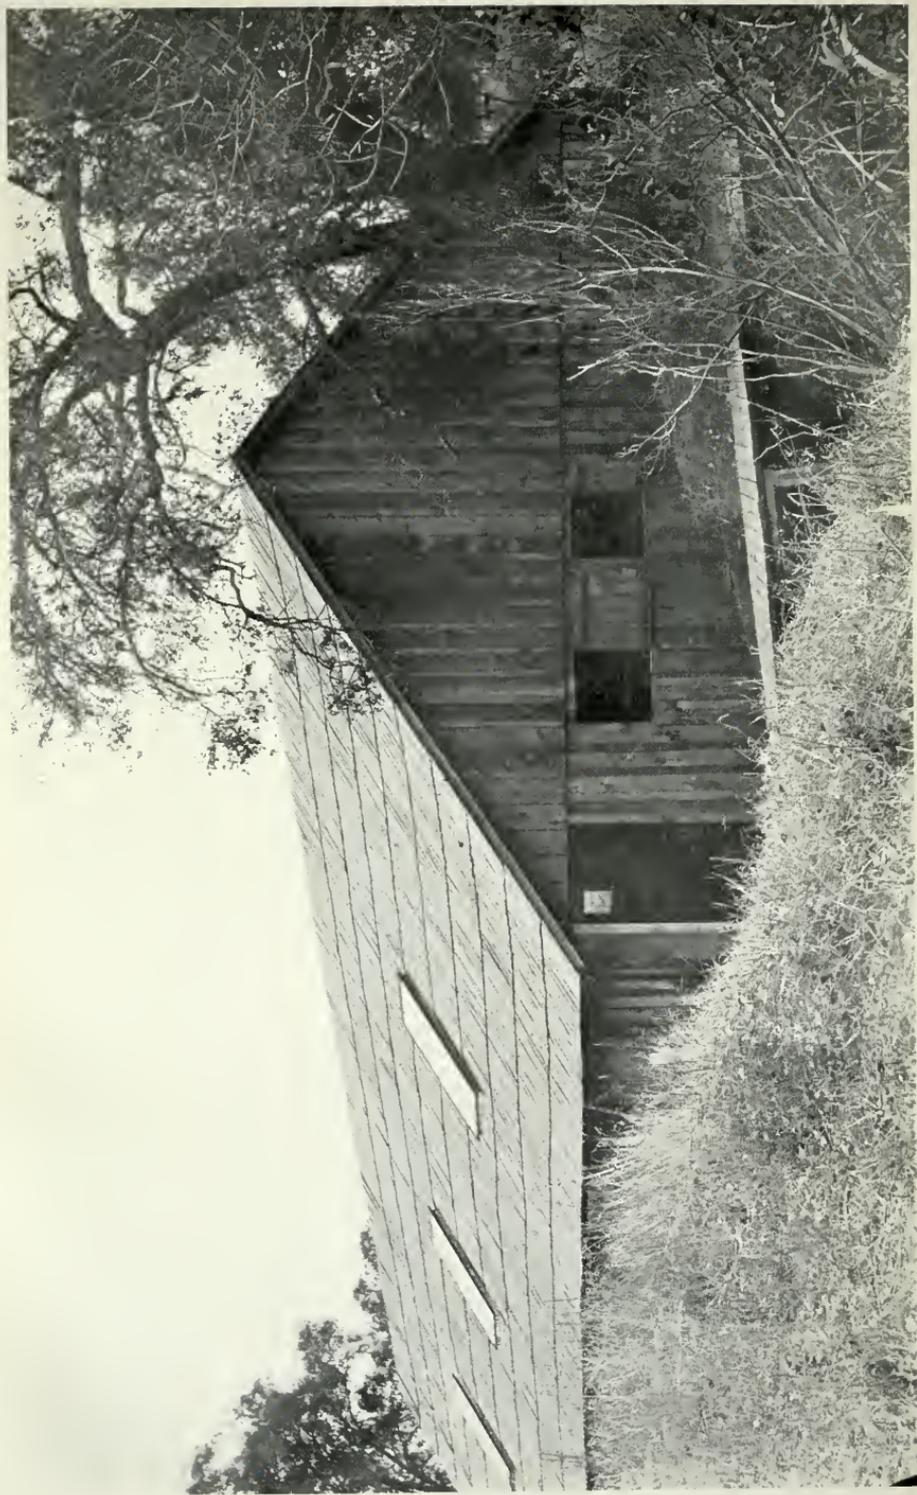

In order that you may fully understand the subject, and deeming it of interest to many, we append herewith a copy of the Act relating to the control and care of the Seal Rocks:

AN ACT TO GRANT CERTAIN SEAL ROCKS TO THE CITY AND COUNTY OF SAN FRANCISCO, STATE OF CALIFORNIA, IN TRUST FOR THE PEOPLE OF THE UNITED STATES.

[Approved February 23, 1887.]

*Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled,* That all the right and title of the United States in and to the rocky islets known as the Seal Rocks, and all rights to seals resorting there, situated off Point Lobos, in the City and County of San Francisco, State of California, are hereby granted, subject to the provisions named, in trust to said city and county, upon the following conditions and for the following uses, to wit: Said city and county shall hold said Seal Rocks inalienable for all time in trust for the people of the United States, and shall commit to the Commissioners of Golden Gate Park the custody and care of said Seal Rocks, and shall keep said rocks free from encroachment by man, and shall preserve from molestation the seals and other animals now accustomed to resort there, to the end that said Seal Rocks will continue to be a public preserve and resort for seals;

BATTLE CREEK HATCHERY.—CALIFORNIA FISH COMMISSION.

provided, that the United States may at all times control and limit or diminish the number of the seals resorting to said rocks, so as to protect the fisheries and fishing industries; and provided further, that whenever any of said rocks or the space occupied by said rocks shall be required by the United States for the erection or maintenance of any public work for any other purpose, then as to the rocks or space so required the provisions of this Act shall terminate and the United States shall be reinvested with the full title, control, and possession thereof. Said city and county shall signify its acceptance of this trust, and thereupon the Commissioner of the General Land Office shall file in his office a plat showing the locus of said Seal Rocks, and said plat shall be the evidence of the extent and position of the premises hereby granted.

SEC. 2. That all Acts in conflict with the provisions of this Act are hereby declared inapplicable to the premises hereby granted.

The laws for the protection of the salmon fishery should not be changed.

The shad fisheries continue to be influenced by the demand for SHAD. The fishermen are limited by the marketmen to that amount which is daily consumed, this being deemed the only

ERRATA.

Page 11—Number pounds Shad for March, 1896, should be 14,375; for April should be 75,625; and total for six months should be 234,612.

Page 12—Number pounds Carp for March, 1896, should be 8,659, and total for six months should be 52,495.

is needed to protect them. This is equally true of the striped bass. The following table of the number of pounds of shad received in the San Francisco market gives but a poor idea of the abundance of these fish:

Month.	1893.	1894.	1895.	1896.
January .....	2,774	41,266	369	4,600
February .....	8,781	11,767	2,106	6,000
March .....	10,019	17,747	14,257	14,353
April .....	32,389	39,115	23,960	65,625
May .....	80,557	57,823	36,729	95,392
June .....	36,184	22,027	25,787	38,620
July .....	170,704	189,745	103,208	224,590
August .....	3,319	7,754	3,213	-----
September .....	2,796	1,764	805	-----
October .....	698	475	3,317	-----
November .....	53,652	23,496	5,788	-----
December .....	96,340	37,987	23,534	-----
.....	77,882	8,158	6,534	-----
Totals .....	405,391	269,379	146,399	-----

The striped bass fishery shows a marked increase. This STRIPED fish is becoming very common in our markets, finding a BASS. ready sale, and being considered one of the best fish offered.

It promises to become one of the most valuable of our fisheries. This is certainly a gratifying result obtained from the acclimatization of 100 fingerling fish in 1879, and 350 in 1882. It is a noteworthy fact that these fish have, during the last two years, sold in San Francisco at a price much lower than in the Eastern markets.

*Number of Pounds of Striped Bass Received in San Francisco Market.*

Month.	1893.	1894.	1895.	1896.
January .....	3,041	14,177	28,328	27,179
February .....	2,752	12,572	15,611	36,107
March .....	5,190	9,002	11,281	38,340
April .....	8,351	9,638	22,000	41,740
May .....	7,232	9,413	12,639	45,903
June .....	4,353	4,820	11,532	15,047
July .....	30,919	59,622	101,391	204,316
August .....	2,950	7,273	13,782	-----
September .....	2,655	5,956	12,419	-----
October .....	8,517	10,021	21,063	-----
November .....	6,720	22,591	28,724	-----
December .....	10,473	17,319	50,245	-----
December .....	17,504	21,972	24,553	-----
Totals .....	79,738	144,754	252,177	-----

Receipts of carp and catfish show an increase for the first CARP AND six months of 1896. These fish, though little considered CATFISH. by most of our people, furnish food for a large number, and figure to a large extent as a market fish. The consumption of these fish in the Sacramento and San Joaquin valleys has been very large, and the receipts in the San Francisco markets were as follows:

*Number of Pounds of Carp and Catfish Received in San Francisco Market.*

Month.	1893.		1894.		1895.		1896.	
	Carp.	Catfish.	Carp.	Catfish.	Carp.	Catfish.	Carp.	Catfish.
January .....	624	1,175	10,142	4,117	6,017	568	22,045	3,896
February .....	519	1,766	4,755	1,696	3,755	680	13,159	2,714
March .....	4,356	2,988	6,798	4,766	3,851	831	8,420	4,807
April .....	3,101	3,705	2,839	5,290	1,568	2,358	4,282	3,461
May .....	560	3,265	767	2,978	555	3,644	1,913	9,160
June .....	1,469	2,155	699	2,630	650	3,151	2,437	4,830
July .....	10,629	15,054	26,000	21,477	16,416	11,232	52,256	28,868
August .....	4,570	2,299	729	695	560	753	-----	-----
September .....	1,665	710	383	357	150	1,159	-----	-----

November .....	3,782	5,547	4,969	2,795	1,355	7,162	-----	-----
December .....	5,969	3,932	4,461	1,526	4,043	3,047	-----	-----
December .....	5,337	3,202	1,642	1,867	3,555	5,672	-----	-----
Totals .....	33,084	36,544	42,580	31,465	26,864	32,282	-----	-----

Since the passage of the Act by the last Legislature making the months of April, May, June, July, and August a close season for sturgeon, many reports have come to us of the large number of these fish seen far up the Sacramento and San Joaquin rivers in places where they have but rarely been seen for years. We are encouraged to think that these fish, being now able to reach natural spawning-grounds unmolested, will in a few years come into the markets in increasing instead of diminishing numbers. The abolishment of the use of the barbarous sturgeon hook, which kills the small as well as the large fish of this species, as well as all other species, should greatly help to increase the productiveness of this fishery. The receipts of this fish for 1896 are given herewith:

January .....	34,181 pounds.
February .....	26,955 pounds.
March .....	18,625 pounds.
Total .....	79,761 pounds.

The principal market supply of trout has continued to come from the Lake Tahoe region. The following table of shipments from Truckee is furnished by the U. S. Commission of Fish and Fisheries. The figures for 1896 are not yet obtainable:

*Number of Pounds of Cut-throat Trout Caught in Lake Tahoe and Shipped from Truckee.*

Month.	1894.	1895.
April .....		928
May .....	7,480	4,643
June .....	10,319	5,728
July .....	2,642	6,299
August .....	7,095	3,376
September .....	4,176	5,741
October .....	3,256	2,035
Totals .....	34,968	28,750

In 1895 fishing was resumed in Lake Tulare after an interval of several years, during which time the Sacramento River perch have rapidly increased in abundance. This Commission made a plant of black bass, yellow perch, and sunfish in this lake in May, 1896, and ordinances were passed by the Supervisors of Kings and Tulare counties prohibiting fishing with nets. The number of pounds of Sacramento River perch taken in this lake in 1895 follows. The figures are furnished by the U. S. Commission of Fish and Fisheries:

March .....	313 pounds.
April .....	14,876 pounds.
May .....	3,945 pounds.
June .....	2,760 pounds.
September .....	230 pounds.
October .....	1,185 pounds.
Total .....	23,309 pounds.

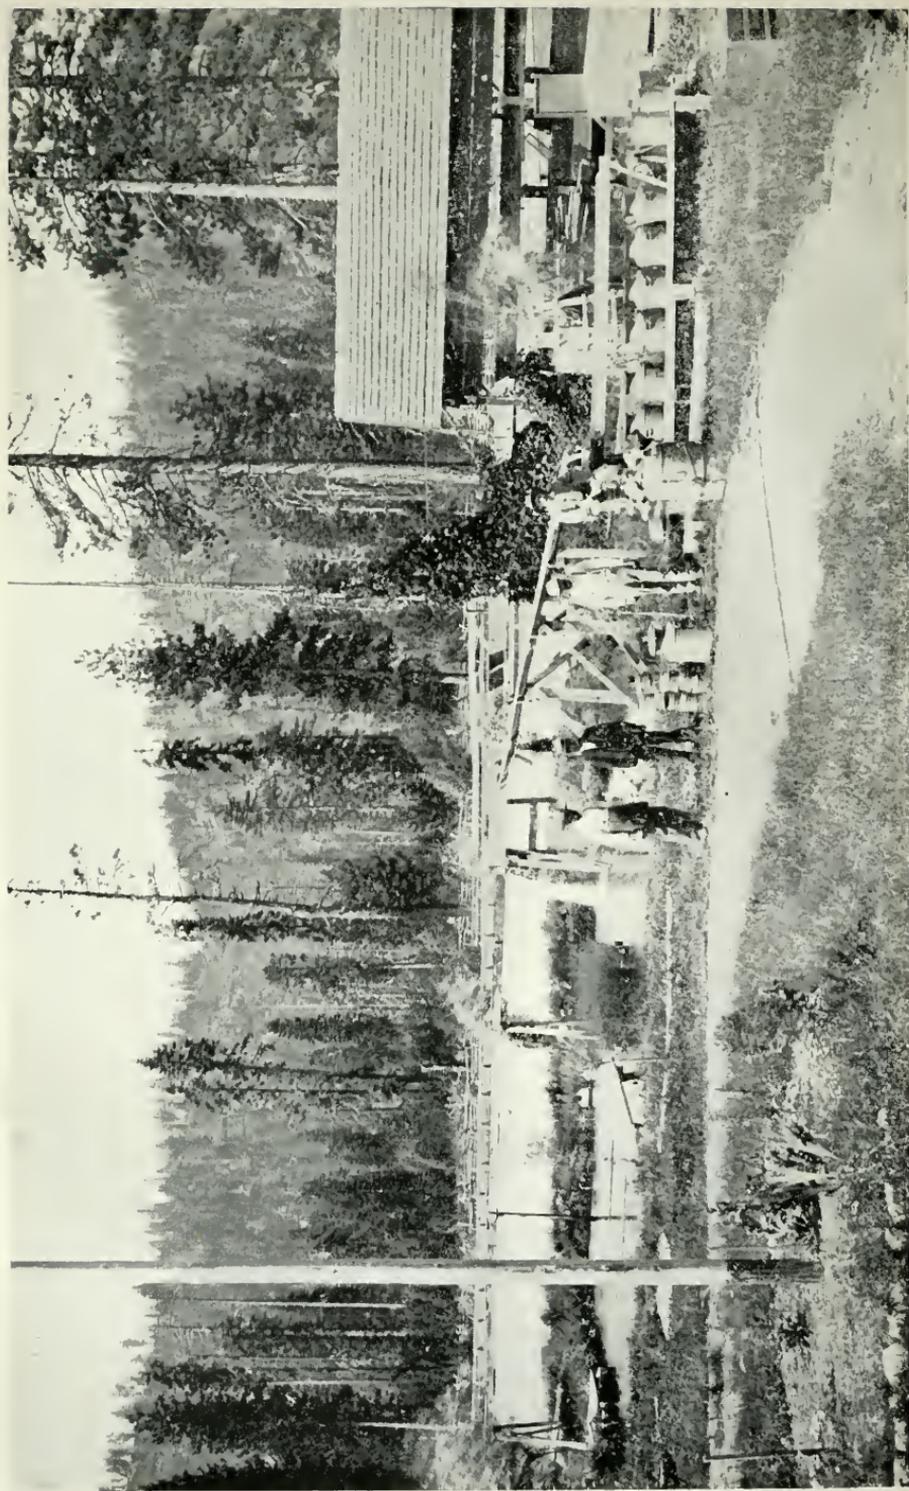

The spiny lobster fishery is developing very rapidly, and under the present laws it receives the protection which should prevent the depletion of the species. Recommendations are herein suggested to the Legislature which will make this law more effective as well as more easily observed by the fisherman. He cannot always weigh a lobster, but it is not a difficult matter to apply a measure, as is done throughout the East. The number of pounds of lobsters taken in Los Angeles County in 1892 were 128,425. The increase in the fishery is shown by the receipts in the Los Angeles markets alone in 1895:

	Pounds.		Pounds.
January .....	9,502	July .....	8,891
February .....	9,225	August .....	14,323
March .....	19,765	September .....	15,056
April .....	15,114	October .....	17,129
May .....	5,743	November .....	13,917
June .....		December .....	15,073
Total .....			143,738

Under the present law it is made a misdemeanor to sell STEELHEAD TROUT. and, as these fish cannot be taken in any numbers except during that period, the enforcement of this law caused the marketmen of San Francisco to take a case into court, claiming that these fish, having the habits of salmon, must therefore be salmon and not trout, as your Commission maintains. Our stand is taken upon the advice of such high authority as Drs. David Starr Jordan and Charles H. Gilbert, of Stanford University. The evidence submitted was so conflicting that the Police Judge dismissed the case. This law was framed and passed with the idea of giving these fish the necessary opportunity to come in from the ocean and reach the spawning-grounds in the headwaters of our coast streams. It is our opinion that this object will be attained, and a sufficient number of fish reach the headwaters to keep up the supply, even if an open season of three months be made during the period of their run. Recommendations for legislation affecting these fish follow hereafter.

While the supply of crabs (*Cancer magister*) is still equal to the demand, the fishery shows that this species is gradually becoming more scarce, for the fisherman is obliged to go a greater distance for his catch. The protection of this branch of the fishery industry should receive the attention of the Legislature, and the recommendations hereafter suggested by us should materially help to restore a fishery worth, in 1892, some \$102,900.

SISSON HATCHERY.—Looking West.—CALIFORNIA FISH COMMISSION.

SAN FRANCISCO MARKET. The status of the San Francisco market, the chief center of the fishery industry, is so well summed up in the report of Mr. W. A. Wilcox, and the manner and methods of taking and handling the catch so tersely described, that we make the following extract therefrom:

"The fresh-fish business of San Francisco presents few changes or improvements. Fish are handled in the same primitive manner often described and always noticed by every one that takes any interest in visiting the fish markets. The fish are seldom dressed and but a small amount of ice is used. \* \* \* Six days in the week, every week in the year, with the exception of a few stormy days, the little lateen-rigged fishing-boats sail out in the morning for the same fishing-grounds, with the same kind of fishing-gear, nets, or trawls; with little trouble they catch the same varieties of fish, and the evening finds them back in their fishing-dock." (p. 197.) "The fresh-fish markets of San Francisco are interesting and in some respects unique. In them one may buy a single pound of fish or a carload, both wholesale and retail business being carried on at the same stand. About 12,000,000 pounds of fresh fish are handled annually, exclusive of those in the Chinese markets. Large quantities of oysters, clams, mussels, shrimp, and crabs are sold annually. \* \* \* The fresh and salt waters of the State are rich in quantity and variety of animal life, and fishery products from all over the State find their way to this market. It is said that over 275 species of fish are found in the waters of the State, although many of these are not used as food, except by the frugal Chinese, who rarely permit anything to go to waste." (p. 208.) "The quantity of fishery product annually withdrawn from these waters is enormous, but it is doubtful if the full resources are utilized or appreciated." (p. 196.)

MONTEREY BAY. Monterey Bay fisheries are as abundantly supplied as ever. The number of salmon taken during the last two summers has been enormous. The catch was so large this year that the Sacramento River Packers Association opened a cannery at Monterey.

SOUTHERN CALIFORNIA. The fisheries of Southern California were augmented by the building of a cannery at San Pedro, in 1895, by the Haniman Fish Company, for the canning of sardines, lobsters, mackerel, barracuda, etc. This cannery was supplied with the latest appliances and gave great promise of enormously increasing the output. Unfortunately, it was completely destroyed by fire in June of this year. The sardine cannery of the California Fish Company, at East San Pedro, has been in operation continuously since our last report, and is most successful.

The San Diego fisheries are the only ones in the State which show a falling off. This is due in a large part to their limited market.

The export trade in fishery products is summed up in  
 EXPORTS. the following table:

*Value of Exports of Fishery Products from San Francisco.\**

Article.	1892.	1893.	1894.	1895.
Codfish .....	\$26,681 00	\$21,412 00	\$16,557 00	\$21,945 00

\* Figures furnished by U. S. Customs officials, San Francisco.

ENFORCING THE LAWS. In the enforcement of the laws we have done all that was possible; and, while not claiming to have covered all of the territory under our jurisdiction, which would be impossible with ten times as many men as our funds will permit of our employing, we do claim to have given the food fishes all the protection possible, and to have so placed our men that the best service was rendered to the most important interests placed in our charge.

SALMON PROTECTION. Our purpose has been to give the salmon fisheries that supervision and protection which is necessary to insure the run of fish reaching the headwaters of our rivers, so that a sufficient number of eggs may be taken to keep up the supply.

An effectual patrol of the bays and rivers from San Francisco to Redding has been maintained during the close season. During both the spring and fall runs our deputies have been kept on the river with instructions to examine the nets and ascertain if the legal-sized mesh was in use and see that the Saturday-Sunday law was not violated. We have hired the launch "Hustler" for this patrol, and have found her well adapted to the river work. The number of arrests made has not been large, because such heavy fines have been imposed under the present laws that the fishermen do not care to take the chances of being caught and convicted. When arrested, they have, almost without exception, fought the cases in court rather than plead guilty, as was their habit when the penalty was less severe.

STURGEON LINES. Thousands of feet of sturgeon lines, the use of which is now prohibited by law, have been taken up; and, never having been claimed, are now in our possession. We are determined to break up the use of this gear, as none more destructive to fish of every kind is in use.

**LICENSES.** The collections of licenses from fishermen who use a boat and net have been made by the patrol department, and a statement showing the amount collected and the number and classes issued will be found in the Appendix.

**RUSSIAN RIVER.** To the enforcement of the fishery laws upon Russian River we have given much attention, and in the winter months, during the run of steelheads, we have maintained a day and night patrol of that part of Russian River where nets can be used. The laws have been effectually enforced and the patrol made numerous arrests. Many set-nets have been taken from the river, whose owners were either unknown or against whom legal proof could not be established. These nets were surrendered to the keeping of the Justices before whom complaints were made.

**TROUT STREAMS.** A patrol of the trout streams has been maintained during the close season, especially of those nearest San Francisco, which are oftenest visited by poachers, resulting in the practical stopping of illegal fishing. As a result of patrolling one stream for a few days and then transferring our deputy to another, we have effectually covered much territory, and kept the streams free from poachers by reason of the uncertainty of the movements of the patrol.

**EXPLOSIVES.** We have used every effort and taken every opportunity to break up the pernicious habit of killing fish with explosives, and are glad to say that we have, in one or two instances, succeeded in punishing the guilty parties. It is but seldom that the transgressor can be caught, as he does not use the explosive save when he thinks himself unobserved, and it takes him but a few minutes to remove every evidence which would in any way incriminate him, although the result of his guilty actions are apparent on every hand, and the destruction wrought by his dastardly act is not soon repaired.

**BIG GUNS.** In an endeavor to enforce the law prohibiting the use of shotguns of larger caliber than ten-gauge, we kept a deputy in the field in the San Joaquin Valley during the greater part of the shooting season of 1895-96. He made several arrests, but secured but one conviction, though he was heartily supported by the District Attorney of Merced County. We are satisfied, however, that his presence in this section had a good effect on the pot-hunters, and to a great extent stopped the use of big guns.

**FISH-LADDERS.** Many new ladders have been built upon dams throughout the State, and we have made it our constant care to see that all ladders have been kept in repair and open for the passage of fish.

The construction of a suitable fish-ladder upon the dam of the Folsom Water Power Company at Folsom was completed in April, 1896. It is

constructed of rock and cement, is 12 to 18 feet wide, with a fall of one foot in seven, and permits the passage of fish from the pool at the base of the dam up into the canal near the head-gates. To this point the ladder is satisfactory, but the question has been raised regarding the ability of fish to pass the head-gates as they are now operated, owing to the outpouring volume of water. It was our intention to test this point by the use of nets above the head-gates, but no opportunity was had this past season, as there was no apparent run of shad or other migratory fish below the dam. The ladder has not been accepted by your Commission, and will not be until all doubt of its working has been removed.

A reliable correspondent at Auburn reports the presence of shad in the American River below that point and above the Folsom dam.

A passageway for fish has been cut in the rock on the east side of the dam in the American River near Folsom, owned by the American River Ditch and Milling Company, which removes all doubt of fish being able to pass this obstruction.

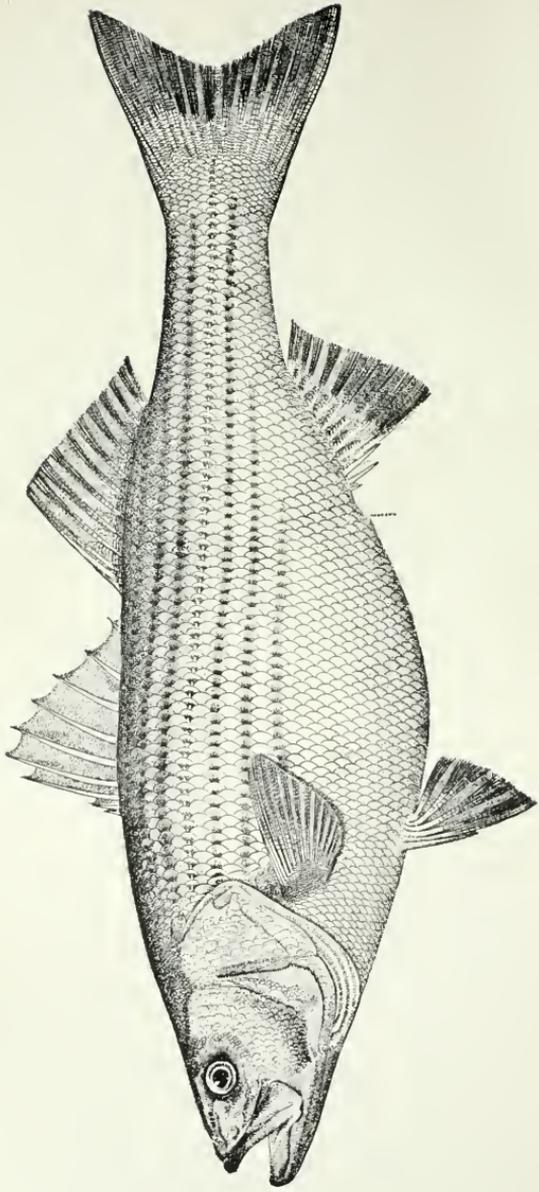

The construction of a fish-ladder upon the dam in the Tuolumne River, above La Grange, is delayed, owing to the fact that it is the joint property of the Modesto and Turlock irrigation districts, which are now prevented from any proceedings by an injunction pending a decision from the United States Supreme Court regarding the constitutionality of the Wright Irrigation Law.

The engineering difficulties in constructing a fish-ladder upon this dam are great. The top of the dam is 98 feet above the bed of the river, and the conformation of the banks will make the construction and maintenance of a fishway a difficult and expensive undertaking. The run of migratory fishes at this point is not large. The number of salmon that enter this stream to spawn is small, and after its waters are taken out for irrigating purposes, will probably decrease. We are of the opinion that the construction of a ladder upon this dam is not warranted, and would be of little or no benefit to the people or the fish.

The dam in the Klamath River at Pokegama, in Siskiyou County, has been the source of much trouble and damage to the tributary streams above that point. The ladder built in 1894 was washed out during the high water in the spring of 1895, but was replaced in the fall of that year. It was again carried away in January, 1896, and now different plans have been furnished for its reconstruction. Owing to the loss of this ladder we were prevented from taking the usual number of rainbow trout eggs at the Shovel Creek station.

It is to be regretted that the law does not permit the Board to cause many of the old ladders upon the dams in the Truckee River to be replaced, as many of them are small and badly located upon the dams; but,

STRIPED BASS—*Roccus lineatus*.

as the owners built them according to plans furnished by previous Commissioners, we are unable to rectify the matter until they are destroyed.

Many complaints have come to this office concerning the condition of some of the ladders and dams in the Truckee River in the State of Nevada, it being claimed that fish could not pass over them in their annual run from Pyramid Lake. We have upon several occasions called the attention of the Nevada Commissioner to these dams, and regret to inform you that the matter has not been treated in the considerate manner our mutual interests in this valuable stream would seem to deserve.

A new ladder has been constructed on the dam in the Little Truckee, at Boca; and, the gates in the dam some miles above that point having been removed, the fish can now pass the entire length of this valuable stream.

The conditions in the Truckee River basin were never more to the satisfaction of the sportsman than at present.

**SAWDUST.** The law prohibiting the dumping of "shavings, slabs, edgings, and mill and factory refuse" into streams has been rigidly enforced everywhere. In the summer of 1895 the Attorney-General, at the request of your Commission, obtained an injunction from the Superior Court of Sacramento County restraining the Truckee Lumber Company and the State Line Mill Company from dumping their mill and factory refuse into the Truckee River, since which time it has been free from deleterious matter. An appeal to the Supreme Court was taken by the Truckee Lumber Company in May, 1896. If a decision is rendered in time, it is our intention to include extracts from it in the Appendix to this report, as well as from the brief filed by the Attorney-General.

**SCREENS.** The matter of the placing of screens at the heads of water ditches has received due attention. In many cases screens have been placed in ditches by order of the Board. There are, however, many irrigating ditches in the State where the placing of screens is considered inadvisable and unnecessary. The use of screens with meshes small enough to exclude trout fry would, in many cases, practically shut off the water from the ditch. It is true that some of these ditches carry many small fish on to the fields to die, but the total value of the fish products of these streams does not equal the one thousandth part of the value of these waters to the orchards and fields. That we have in these matters exercised and carried out the intention of the Legislature is not open to question.

The importance of the work in Southern California and Humboldt County has made it advisable to keep a man stationed in each of these localities during certain seasons of the year. By this means the supervision of the commercial fisheries and the enforcement of the fish and

game laws has been better subserved. We are glad to report that these districts are to-day in better condition than ever before.

Section 626*i* of the Penal Code, as amended by the last GAME LAWS. Legislature, has unfortunately made some enemies for game protection, since it allows the sale of game birds but two months in the year, while it is made lawful to shoot them during four months. This is indisputably good law, although it has been called class legislation. However unjust the claim may be that it is a discrimination in favor of sportsmen, it cannot be denied but that an adverse public sentiment has been aroused, particularly evidenced by the discharge of offenders tried by the Police Court of San Francisco.

It is an undisputed fact that the game of this State is decreasing. It therefore follows that it needs protection, not only within the confines of this State, but also in Alaska, where the destruction of wild-fowl eggs does more to decrease the abundance of ducks than does hunting them here. Our game is too valuable a resource not to receive the consideration it demands at the hands of our people; but, until all classes are united for the common purpose of protection, a law like the present one only serves to incite the aggrieved parties to disobey it, and that leads to the infringement of other laws.

The repeated failures to convict the dealers arrested for selling game when it could be legally shot but not sold, is, in itself, sufficient to prove that public sentiment does not sustain the law. The law does not place the restriction upon the market-hunter that is claimed for it. Many birds are from the opening of the killing season placed in cold storage until such time as they can be legally sold. Complaints against the workings of this law have been made to your Commission from all sections of the State. The press of the State has voiced public sentiment in its demand that the seasons shall be made alike to all.

We recommend that restrictions upon the sportsman and the market-hunter be made alike. We realize that this will be opposed by some sportsmen, but the law will then receive public approval and end the effective cry before a jury that it is legislation for the sportsmen against the people, and that sportsmen do not care to protect the game, except for themselves, and not for a food supply. The marketmen are in favor of game protection, but insist that the open season, be it longer or shorter, shall be the same for all.

It is well known that kindly feelings do not exist between the so-called sportsmen and the market hunters and dealers. All have their rights, and it is not our intention to advocate laws favorable to any class. We simply recommend that such laws be enacted as will serve the best interests of all.

A special effort was made to enforce Section 626*i*, and prohibit the buying and selling of game in the markets of San Francisco, both before and

after the season allowed by law. Evidence of the most conclusive character was introduced in court by Deputy Attorney-General Jackson, who conducted the prosecutions, yet it was impossible to convict except in one case. In several of the strongest cases every effort was made to convict, but a verdict of "not guilty" was returned so quickly by the juries that the Police Judges stated, in dismissing the balance of the cases, that they were satisfied that, though the evidence was conclusive, convictions could not be had under the law, and that they could not block the administration of justice in their courts by giving places on the calendar to such cases. Orders were given by the various Judges to issue no more complaints under that section.

So unpopular is this law, and so sure were the marketmen of the result of all arrests, that but little effort was made to conceal their violations. Most any one, unless he were a recognized officer, could buy game birds at any time, and we were powerless to prevent it.

In order that the dealers might not lose their regular customers, many of them who would otherwise have observed the law were obliged to sell game out of season, because other dealers less conscientious were doing so. These dealers when arrested, rather than suffer the annoyance of a trial, pleaded guilty and a small fine was imposed, making our record of convictions less humiliating.

In the counties where Game Wardens have been appointed, the success of the system has been fully demonstrated. The people observe these laws and demand their enforcement, and the courts have supported the Wardens in their administration. It is unfortunate that more Boards of Supervisors have not been sufficiently alive to the value of these interests and appointed Game Wardens. One live man in each county of this State would effectually stop infractions of the law.

On account of the vast area requiring protection, and the small force of men at our disposal, it has been impossible to keep a man in a given locality longer than a few days at a time. The presence of a deputy is sufficient to stop all poaching in that vicinity so long as he remains, but poaching is resumed as soon as he is ordered to other fields. This condition has been to some extent remedied in many sections by the appointment of deputies who serve without pay. Their service, however, is not as efficient as it should be, because they cannot afford to spend much time, nor do they care to incur the displeasure of poachers. The payment of a moderate salary to a man placed in a territory sufficiently small for him to cover well, will reduce poaching to a minimum. He may not make many arrests, but his presence will serve to warn violators of what may be expected of an infringement of the law.

Because we deem the present system for the enforcement of the fish and game laws to be inadequate, we invite your attention to recommenda-

## Summary of Arrests Made by Deputies of Fish Commission, and Outcome of Cases, for Two Years ending September 1, 1896.

Number of Arrests.	Charged With—	Pleaded Guilty	Jury Trial	Convicted	Amount of Fines	Days' Imprisonment	Paid Cost of Court	Acquitted	Cases Dismissed	*Complaints against John Doe	Remarks.
7	Selling and possession of salmon, close season.	4		2	\$129 00				1		Sixteen cases dismissed in Del Norte County.
22	Catching salmon, close season	1	5		100 00			3	16	6	
9	Saturday and Sunday fishing for salmon	2			200 00				1		
15	Illegal mesh-nets	6	5		400 00			5	4		
18	Set-nets							5	1	12

2	Use of sturgeon gear		2	2	200 00						
9	Set-nets in Kussian River	2			50 00					7	Jury disagreed; conviction secured second trial.
9	Taking steelhead trout with net	4	1		30 00			1	4		
1	Selling steelhead trout							1			Test case.
1	Taking trout with trap										Jury disagreed; conviction secured second trial.
17	Taking trout, close season	10	5	3	121 00	10	2	2	1		No bond required by Judge; defendant escaped.
11	Possession of underweight lobsters	7	3	1	69 20	25		2			One defendant forfeited bail.
1	Possession of underweight striped bass	1			5 00						
2	Dumping sawdust into streams.							2			
1	Possession of deer meat, Humboldt County	1			32 00	8					
1	Possession of deer skins		1	1		50					
1	Selling deer meat.	1			10 00						
5	Use of big-bore guns		1	2							One case dismissed; hung jury.
7	Shooting ducks, quail, and grouse out of season	4	3	1	45 00			1	1		One case dismissed; hung jury.
1	Possession of quail	1			20 00						
26	Selling ducks and quail out of season	15	3	1	120 00			2	8		
		69	29	19	\$1,620 90	93	8	24	39	25	

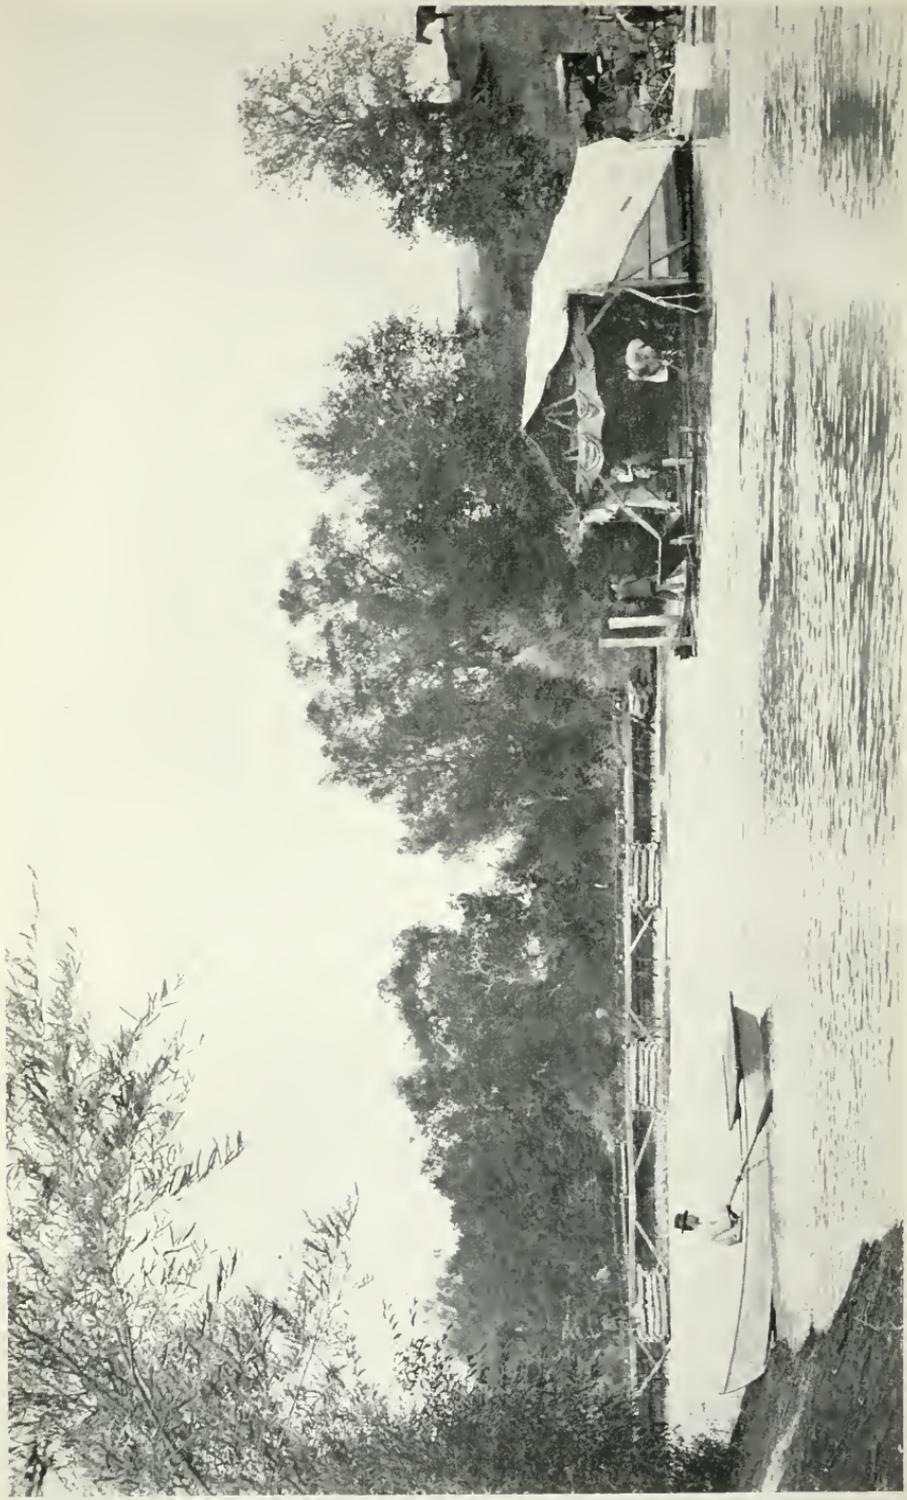

\*Nets held for evidence and never claimed. Owners ran off and left nets.

17 sets of sturgeon line taken up. Same never claimed.

1,850 pounds salmon seized on wharf. Same never claimed.

8 bales Oregon deer hides seized from steamer. Same never claimed.

RACK AND WEIR.—BATTLE CREEK HATCHERY.

tions for legislation which we think will, with little expense, save many dollars to the State, and result in great benefit to our fish and game interests.

That you may more readily see in detail the number and character of arrests made by our deputies, we call attention to the table on opposite page, showing a record of the work in this regard.

Never before in the history of the California Fish Commission have such rapid strides been made in the introduction and propagation of valuable food and game fishes as during the last two years. Having such varied characteristics of land and water formation, some suitable location can be found in this State for the transplanting of nearly every variety of food and game fish. To this cause, in great measure, is due the success of the Commission in securing such grand results.

Dr. H. M. Smith, of the U. S. Commission of Fish and Fisheries, says, in his paper already referred to:

"The results attending the experimental introduction of aquatic food animals into the waters of the Pacific States must be regarded among the foremost achievements in fish culture. The striking illustrations here presented of the influence of man over the supply of free swimming anadromous fishes, to say nothing of his ability to affect the abundance of non-migratory species, are of great economic and scientific interest. Aside from the great economic results which have followed the introduction of east-coast fishes into the waters of the Pacific States, a very important basis has been furnished for judging of the general effects of artificial methods in regions where the object of fish-cultural operations has been to maintain and increase the abundance of native species." (p. 379.)

While our operations have in great measure been devoted to the propagation of the native species of fish, we have also endeavored to stock all suitable waters with imported species, and have introduced several new varieties of trout.

From a desire to further increase the run of salmon in the Sacramento River, we caused a thorough investigation to be made of its headwaters, with a view to establishing a spawning station. This investigation covered a period of two seasons, and resulted in the erection of a hatchery near the mouth of Battle Creek, in Tehama County, in September, 1895. Battle Creek is the large stream of water which divides Tehama and Shasta counties on the east side of the Sacramento River. It takes its source from Mount Lassen, and carries a large volume of water during the entire year. It is not subject to floods during the early winter months. Salmon enter this stream in large numbers during the months of October and November.

The Battle Creek station is located on the lands of Mr. Frank R. Love, of Anderson, who generously donated to the State a lease for five years of such land as was required for buildings. The necessary water is supplied to the hatchery from Battle Creek through a ditch some three

quarters of a mile long. The right of way for this ditch was also donated by Mr. Frank R. Love and Messrs. J. & A. Nunes.

The building erected is 90 by 40 feet, and is fitted with sixty hatching-boxes, a capacity of ten million eggs. The salmon are retained at the station by a rack or weir, placed across the creek, which is 173 feet long, and is sufficiently supported by five bulkheads to withstand a rise of 6 feet in the water.

The building, racks, and equipments cost the State \$2,600, less \$500 donated by the salmon canneries on the Sacramento River. The bills were paid out of the Fish Commission Fund. The work of construction was begun in September, 1895, and the first spawn was taken on the 21st of the following month. On November 12th, the full capacity of the hatchery—ten million—was reached. The run of spawn-fish showed no signs of abatement at the time we ceased operations, and the racks were removed from the creek that the balance of the run might pass up to their natural spawning-grounds. Double the amount of spawn could have been taken had the capacity of our hatchery permitted.

The eggs taken were eyed at Battle Creek and then forwarded to Sisson to be hatched, the latter place being deemed a more suitable and economical point for distribution. We sent one million eggs to the United States hatchery at Clackamas, Or., and were thereby pleased to repay in part some of the many kindnesses received from the National Commission.

*Summary of Salmon Output from Battle Creek Spawning Station during Year of 1895.*

Point of Shipment.	Eggs.	Fry.
Sisson Hatchery.....	9,000,000	-----
U. S. Commission station, Clackamas, Oregon.....	1,000,000	-----
Total .....	10,000,000	-----

This location is most favorable for the taking of salmon spawn, there being almost no limit to the number of eggs which can be secured there with proper apparatus. In order that every advantage might be taken of the benefits of the station, realizing that large appropriations would be necessary for us to carry on the work, we made a proposition to Capt. John J. Brice, U. S. Commissioner of Fish and Fisheries, to enlarge and operate it. The matter received his prompt attention. One of his staff in Washington was detailed to visit the station and to report upon its advantages. This report so pleased him that he visited the station and made personal investigations. He attended the August meeting of this Board and requested the privilege of erecting temporary buildings that would enable him to handle the surplus after we had filled our hatchery. He stated that he was desirous of purchasing the station, but that before

this could be done it would be necessary for Congress to make an appropriation for the purpose. You will recall that we submitted this entire question for your approval before entering into these negotiations. We deem it to the State's best interests that this station be sold to the U. S. Commission at cost, and the moneys so received applied to increasing the capacity of the hatchery at Sisson, or to the establishment of another salmon station.

The Sisson hatchery has been operated to its full capacity during the last two years, as the summary of distributions from that station will show. It would be a material assistance to our work if the capacity of this station could be increased.

The greater portion of the summer and fall take of salmon eggs at the United States station at Baird, on the McCloud River, were sent to us as usual, and hatched at Sisson. They numbered 3,587,000 in 1894, and 6,750,800 in 1895.

All of the new varieties of trout distributed throughout the State were hatched here; also the native rainbow and cut-throat eggs received from the Shovel Creek and Tahoe stations, and the take of salmon eggs at Battle Creek.

A lease for five years of the ground just west of the old nurseries was obtained from Mrs. L. M. Sisson for the nominal sum of \$1, and a small lake constructed thereon by raising an embankment on two sides. We could not have handled the large number of salmon eggs hatched there without this lake, as the capacity of the hatchery was entirely inadequate. The alevins were put in the lake soon after hatching, and after the sac was absorbed the young fry were daily fed until the screens were removed and they were allowed to escape into streams tributary to the Sacramento. This lake, together with Sisson and Klink's lakes, which are leased by us, afford ample rearing ponds for fish. Sisson Lake now contains large-mouth black bass, and 20,000 brown trout fry have been placed in Klink's Lake, where they will be kept for breeding purposes, and the new lake now contains some 3,000 Loch Leven trout, from which we hope to obtain spawn another season.

Totals .....	5,777,000	314	16,131,830	2,247

The golden trout which were brought to us by the members GOLDEN of the Visalia Sportsmen's Club, were placed in one of our TROUT. ponds at the Sisson hatchery, where they thrived until attacked, just before the spawning period in 1895, by some disease, which killed them all.

The operations at Shovel Creek station, both in 1895 and 1896, SHOVEL were almost a failure, because the ladder on the dam in the CREEK. Klamath River at Pokegama was washed out by the high water. For this reason the take was barely sufficient to enable us to fulfill our agreement with the Fish Commissioner of Nevada to give him 300,000 rainbow-trout spawn in exchange for a like number of eastern brook-trout eggs.

It has not been deemed expedient to operate the Bear Valley BEAR hatchery in Marin County during the last two years, for the VALLEY. reason that it was more economical to concentrate our hatchery operations at Sisson.

The amount of cut-throat trout spawn taken at Lake Tahoe has LAKE exceeded that taken in any previous two years. The hatch- TAHOE. ery at Tahoe City has been operated to its fullest capacity, all of the eggs, with the exception of those hatched at the new hatchery near Tallac, being eyed there. The water-supply at this station is hardly sufficient for the needs of the work, and with the increased take during the last two years it has been rather a difficult matter to carry on the work with the crowded condition of the boxes. This condition was somewhat relieved by shipping the eggs to the Sisson hatchery as soon as possible.

A temporary hatchery was erected by M. Lawrence & Co., TALLAC. proprietors of the Tallac House at Lake Tahoe, on Taylor Creek, in 1895, but the water-supply was not satisfactory. This year a permanent building was placed by them some three miles from the hotel, on a stream which affords a supply adequate to every need. The operation of this hatchery was placed under the control of

WAWONA HATCHERY.—CALIFORNIA FISH COMMISSION.

this Commission, upon condition that we operate it to its greatest capacity and place the fry in public waters in that vicinity. Our operations at Lake Tahoe have been promoted in every way possible by M. Lawrence & Co., and other residents.

Operations were carried on both years on Taylor and Blackwood creeks, the former proving more productive, as the following table shows:

*Take of Cut-Throat Trout Eggs at Lake Tahoe.*

	1895.	1896.
Taylor Creek .....	4,240,000	4,014,700
Blackwood Creek .....	160,000	349,300
Totals .....	4,400,000	4,364,000

Incident to our operations at Lake Tahoe, an unfortunate working of the law for the protection of trout ought to be mentioned. From this locality are annually taken for the markets over 50,000 pounds of trout. The season for taking trout opens on April 1st. An examination of our spawning records will show that the trout of Lake Tahoe do not begin to spawn before April, that the greater number spawn in the latter part of April and during May, and that a considerable number do not spawn until June. This is equally true of the fish in lakes Donner, Independence, and Webber, and the tributary streams. These fish are in the best marketable condition from July to January. This matter has been called to the attention of the Boards of Supervisors of El Dorado, Placer, and Nevada counties, but with the exception of Placer County no action has been taken.

\*Alevins.

The inaccessibility of the region in and about the WAWONA. Yosemite National Park has made it extremely difficult to stock its numerous waters with fish. This difficulty was obviated by the erection and equipment of a branch hatchery at Wawona, Mariposa County, in the spring of 1895, by Messrs. Washburn Bros., proprietors of the Yosemite-Raymond stage line. This hatchery was turned over to this Commission, to be operated upon condition that an annual hatch of 500,000 trout eggs should be distributed in that vicinity. This station is well located geographically, but unfortunately the temperature of the water rises considerably during July and August. In 1895 the first shipment of cut-throat trout eggs reached Wawona on June 10th, but by sending eggs to this station in April, this year much better success attended the season's work. At the close of operations in 1895 we caused a thorough investigation to be made of the streams and lakes of the Yosemite National Park, in order that an intelligent distribution might thereafter be made. Acting upon the result of these investigations we made a special effort this year to stock the most favorable waters of the Park. The result is shown in the table of distribution in the Appendix.

*Summary of Distribution from Wawona Hatchery.*

	1895.	1896.
Cut-throat fry .....	293,000	160,000
Rainbow fry .....		284,000
Totals .....	293,000	444,000

In the operation of this station our men have at all times received the cordial support and aid of Messrs. Washburn.

In the distribution of fish from the Wawona hatchery we have been materially assisted by the United States troops stationed near Wawona. In 1895, Capt. Alex. Rodgers, and in 1896, Col. S. B. M. Young, Fourth Cavalry, U. S. A., placed their teams and pack trains at our service and detailed the necessary officers and men to assist us.

It will be seen from the list of distributions of fish from DISTRIBUTION. the Wawona hatchery that the entire shipment leaving the building did not always reach the streams named. The distributing trips consumed from two to four days with pack trains over trails sometimes almost impassable. Considering the difficulties encountered, all concerned were gratified if a sufficient number were placed in the lake or stream to eventually stock it. Fish cans, especially adapted to the transportation of fish by pack animals, were designed for this work; and with the new, large round cans purchased, we are now well equipped for distributing fish throughout the State.

In the distribution of fish in the counties where Game Wardens were

appointed, the fry have been consigned to them, and they have given them a wider distribution than otherwise would have been possible; and for this reason those counties have been favored with larger consignments than counties where there is no Game Warden.

With the exception of the landlocked salmon and Mackinaw and Loch Leven trout, all the fish distributed from eggs PLANTING. hatched at our stations have been feeding fry. We are alive to the advantages of planting yearlings, and aware of the position taken by the National and State Commissions upon this question, but the conditions in our waters are much different than in the Eastern streams. Our mountain streams are in the main free from darters and other predaceous fishes, except trout. Our laws do not permit the closing of the portion of streams stocked, nor do they regulate the size of trout to be taken. The unqualified success of the planting of trout fry in this State, and the greatly added expense of rearing any considerable number of yearlings under our present limited appropriations, make it inadvisable and impracticable. The fact that hand-fed fish also lose the instinct of self-preservation to a great degree, must be taken into consideration. The success of planting salmon fry, as soon as possible after the sac is absorbed, in the headwaters of the Sacramento River, cannot be questioned. A close inspection of these small streams during the last few winters has shown them to be swarming with young salmon that immediately seek shelter upon the approach of the observer.

The U. S. Commission of Fish and Fisheries brought out LAKE and planted in the waters of the Feather River, near Grid-CUYAMACA. ley, and in Lake Cuyamaca, San Diego County, in 1891, 500 catfish (*Ictalurus punctatus*), 6,980 yellow perch (*Perca flavescens*), 2,610 large-mouth black bass (*Micropterus salmoides*), 285 crappie (*Pomoxis annularis* and *P. sparoides*), 500 rockbass (*Ambloplites rupestris*), 500 pickerel (*Lucius vermiculatus*), and a number of green sunfish (*Lepomis cyanellus*) and golden shiners (*Notemigonus crysoleucas*). It is reported that these fish have done well in the Feather River; just how well it is, of course, impossible to tell. In order that the National Commission might know the results attained in Lake Cuyamaca, we sent a representative there in January, 1896, who reported that large numbers of all of the above varieties were found except the crappie and rockbass. Upon application, permission was granted by Mr. L. F. Doolittle, Secretary of the San Diego Flume Company, to take fish from the lake for distribution. As early as the weather would permit, we sent two of our men to Lake Cuyamaca, who secured sufficient fish to make a total distribution of 541 large-mouth black bass, 27 pickerel, 454 yellow perch, 116 sunfish, and 253 shiners (fish food). These fish were nearly all full grown, varying in size from one half to five pounds, and most of them with ripe spawn, so that good results

may be expected in all waters stocked. We placed the bass in the Sacramento River, in Tulare and Clear lakes and their tributaries, believing that they will thrive in those waters on the carp and suckers found there in large numbers. We have also stocked several ponds and lakes in various parts of the State with these varieties, reserving the right to take fish from them at any time for stocking purposes. We have also placed a number of fish in one of the ponds at Sisson, where we intend holding them for breeding purposes.

For the purpose of distribution during the two seasons last passed we have drawn upon the supply of small-mouth black bass in the lake of the Benicia Water Company, in conformity with the contract made when this lake was stocked. Through the courtesy of Mr. James L. Flood we have also been permitted to take this variety of bass from his lake. The largest distribution of black bass ever made in this State was made during the season of 1895. The chief source of supply was Russian River, where the fry was taken in large numbers. Unfavorable conditions this year made it impossible to take any fry from this stream.

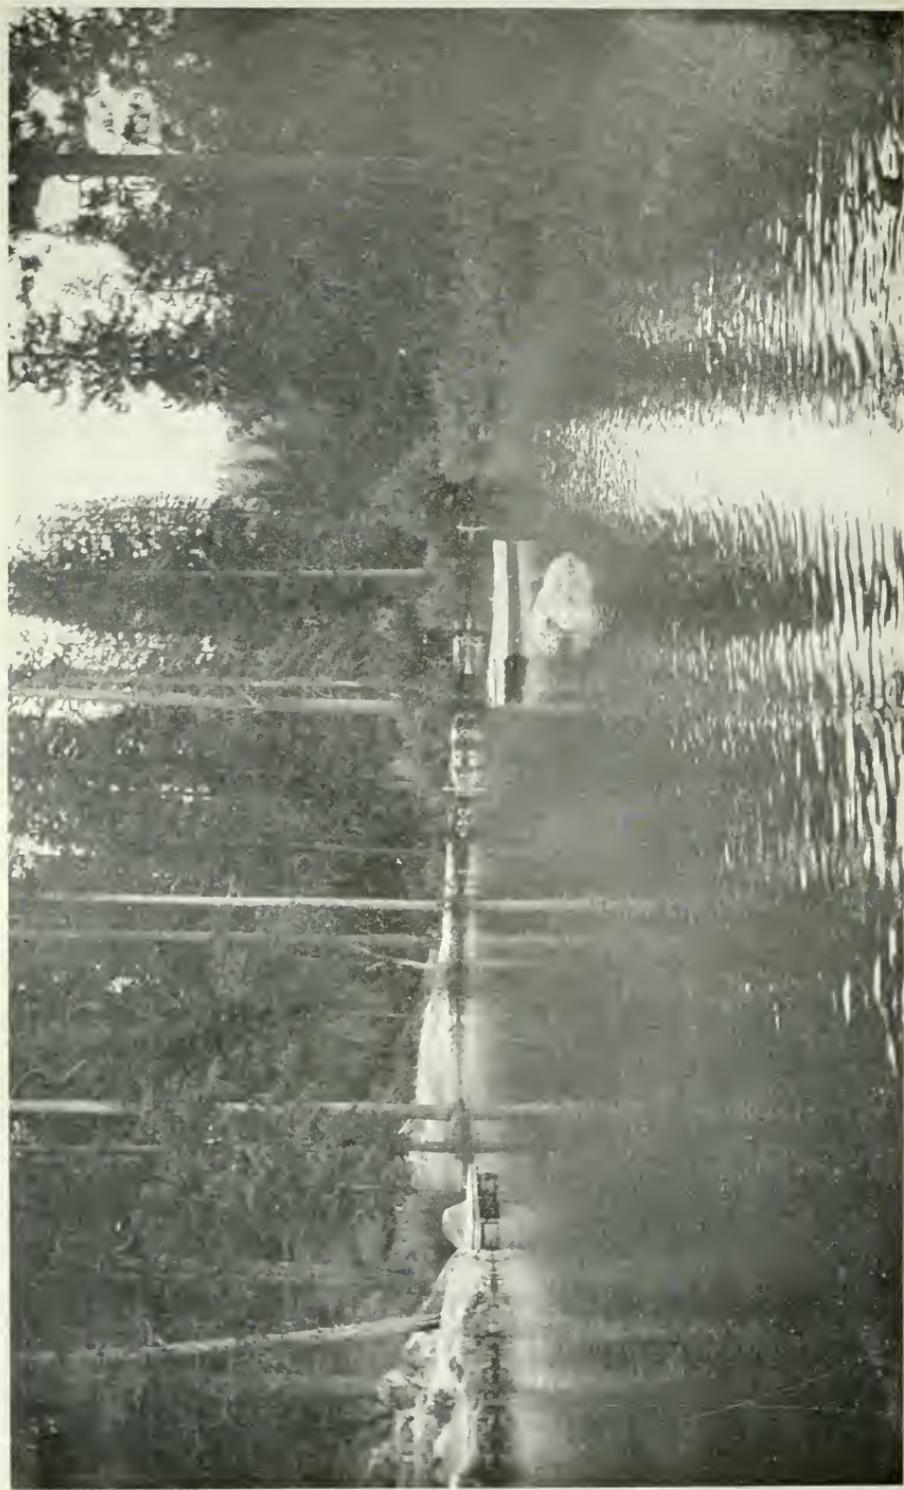

We received 100,000 Mackinaw (*Salvelinus namaycush*) from the U. S. Fish Commission station at Northville, Mich., and 10,000 landlocked salmon (*Salmo salar sebago*) from Greenlake, Me., in 1895. In exchange for a like number of German brown trout (*Salmo fario*) eggs, we sent Mr. J. Annin, Jr., of Caledonia, N. Y., 25,000 cut-throat spawn in 1895. We also purchased 100,000 eggs of this variety from him; and, with the 10,000 received from Hoopa Valley, through the courtesy of the U. S. Commissioner of Fish and Fisheries, a total of 135,000 were hatched at Sisson.

Our request for a carload of large-mouth black bass was granted by the U. S. Commissioner of Fish and Fisheries, and in June, 1895, Car No. 3 reached here with 2,600 fingerlings. The expense of transporting this car from Ogden was jointly borne by the Spring Valley Water Company and your Commission, with the understanding that one half the bass should be placed in their lakes. These bass arrived in splendid condition, and were distributed as follows:

Lake Merced.....	300.
Crystal Springs Lake .....	1,000
Buena Vista Lake, Kern County.....	50
Gay Pond, San Diego County.....	50
Elsinore Lake, Riverside County .....	50
Sisson Lake, for breeders.....	1,200
Total.....	2,650

Besides the bass, the car contained several other varieties of fish, which were distributed as follows: Elsinore Lake, 18 sunfish (*Lepomis cyanellus*); Balsa Chico River, Orange County, 18 sunfish (same

DEADEND POND—WAWONA HATCHERY—CALIFORNIA FISH COMMISSION.

variety), 8 Warmouth bass (*Chænobryttus gulosus*), and 18 catfish (*Ictalurus punctatus*). The following were sent to Sisson and placed in one of the rearing-ponds: 12 yearling white bass, 12 yearling Warmouth bass, and 3 adult yellow perch.

Applications are now on file with Hon. J. J. Brice, U. S. Commissioner of Fish and Fisheries, for a carload of pike-perch or wall-eyed pike, and alewives. We are also desirous of obtaining a further supply of landlocked salmon and Loch Leven, Mackinaw, and German brown trout eggs. Applications will be made in due time for these, as well as the blue crabs and diamond-back terrapin, which we believe will do well in our waters. We have had some negotiations with U. S. Commissioner Brice and members of his staff, relative to planting in the Pacific Ocean certain varieties of Atlantic deep-sea fishes.

## Summary of Distribution of Fish for years ending September 1, 1895 and 1896.

\*200,000 alevins. †Fish food.

In February and March of 1896, at the request of the CRABS AND fishermen and others of Los Angeles County, we trans- CLAMS. planted, in prime condition, from the waters about San Francisco to those off the coast of Los Angeles County, 116 large crabs (*Cancer magister*)—56 males and 60 females. At our request the Supervisors of Los Angeles County passed an ordinance prohibiting the taking of this crab for three years. To show his appreciation of the above work, Mr. J. L. DeJarnatt, Vice-President of the Haniman Fish Company, of San Pedro, presented us with 8,000 razor-back clams, and these, together with 7,000 more which we purchased, were planted as follows:

San Francisco Bay, in outlet of San Leandro Creek.....	4,000
San Pablo Bay, in outlet of Petaluma Creek.....	4,000
Richardson's Bay.....	3,500
Tomales Bay, near Hamlet.....	3,500
	15,000

No attempt has yet been made to examine into the results of this experiment.

Reports upon the result of the attempt to acclimatize the PHEASANTS. Mongolian pheasant in 1894 indicate that the experiment has not been altogether successful. It was deemed best by our predecessors to pursue a method which has been fruitful of good results in Oregon. The old birds were sent to citizens in different parts of the State, and were confined in aviaries. They were to be held and their young turned loose. The hen pheasant will not sit on her eggs in confinement, and the attempt to hatch the eggs under domestic hens, as is done in Oregon, was not encouraging, as most of the chicks died when quite young. As a result of this experiment a few birds were turned loose, but we believe that better results will be obtained by turning the birds loose in favorable localities. A large number of birds have been imported into different sections of the State, notably in Santa Clara, Kern, and Tehama counties, and turned loose, and the most encouraging reports come to us regarding their welfare. We are of the opinion that this pheasant can readily adapt himself to the natural conditions of our State, and believe that the start already made to acclimatize him will be successful.

The Commission has given the matter of the protection GAME PRES- and cultivation of game considerable attention since the ERVATION. last Legislature made the appropriation applicable to game as well as to fish. It has been the practice of this and former Boards to give game all the protection possible, although no funds had ever before been provided for this work. With the small force of men at our disposal, the vast area to be covered, and the varied

fish interests demanding attention, it has not been possible to give this matter the attention it deserves.

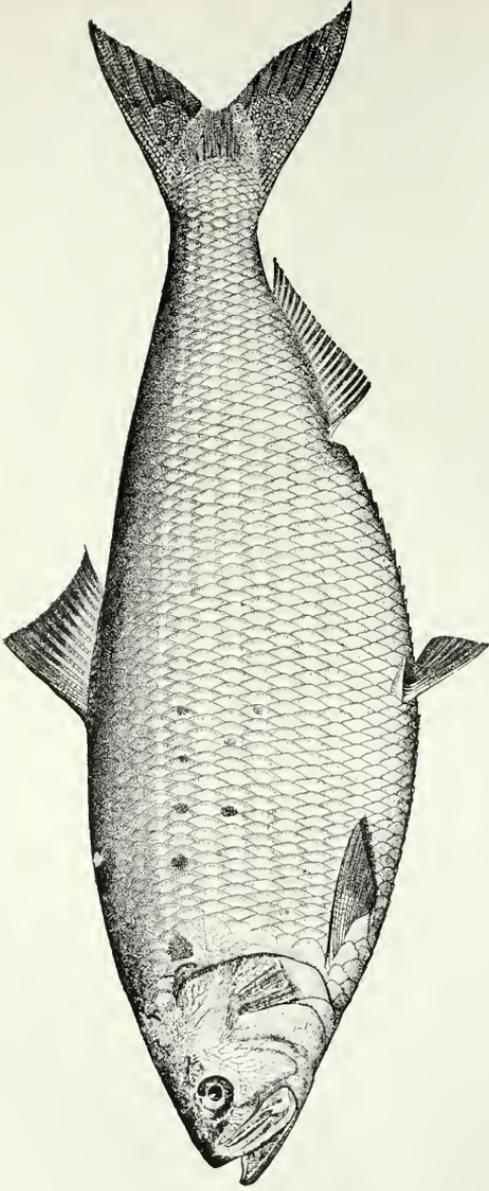

We are of the opinion that the protection and propagation of fish and game will be best subserved by a division of the work, giving to one set of officers the fish-cultural work and the supervision of the commercial fish interests, and to the other the enforcement of the game and game-fish laws.

In order that we might inform ourselves and the better present the matter of game protection to you and the Legislature, and suggest the method most likely to be a success in California, we put ourselves in correspondence with the Fish Commissions and Wardens of the different States, asking for information concerning the protection of game, the success of the present methods, whatever they might be, and their ideas of the method most likely to accomplish the desired end. In many of the States, wardens are working under laws which enable them to thoroughly protect the game during the close season. Without a single exception all agree that the State is a great gainer when the proper attention is paid to game protection. In several of the States giving the most attention to game protection and cultivation, the fish and game interests are in the hands of one commission, which appoints and controls a game warden and his deputies, and these commissions report good results. In most of the States, however, the commissioners agree with us that, in order to get the best results, the game and fish interests should be separated.

In 1891 Minnesota took up the question of game preservation and enlarged the Fish Commission from three to five members, and made them the Board of Game and Fish Commissioners. They have an appropriation of \$20,000, of which \$9,000 is set aside for the salaries and expenses of game wardens. They also appoint an executive agent and superintendent of fisheries. Ohio has a Fish and Game Commission of five members, who appoint a warden. They have an appropriation of \$9,500 per annum. These two States can combine the management of the two interests to good advantage, as their natural conditions are favorable to it. This statement is also true of Wisconsin, with an annual appropriation of \$25,000. The game warden is appointed by the Governor, and is under the control of the Commission of Fisheries. This Commission favors the combining of the management of the two interests, but states that under existing circumstances the plan does not work well.

New York and New Jersey are very much alive to the necessity of liberal support in these matters, as the amount of their appropriations show. New York expends \$72,000 annually, and New Jersey \$30,000. In 1895 New York consolidated her Fisheries and Forest Commissions, and placed the work in the hands of the Fisheries, Game, and Forest

SHAD.—*Alosa sapidissima*.

Commission, composed of five members, the president receiving a salary of \$5,000, and the others \$1,000 per annum, with necessary expenses. They appoint a chief warden and thirty-six deputies, all under salary. New Jersey has a Fish and Game Commission of four members. The law provides for the appointment of twenty-five wardens, at a salary of \$600 a year each, with an allowance of \$200 a year for traveling expenses. These wardens are appointed by the Board of Fish and Game Commissioners, and out of the number so appointed the Board selects one to be chief fish and game protector, at a salary of \$1,200 a year.

It will therefore be seen that Minnesota, Wisconsin, Ohio, New York, and New Jersey all have large commissions, and the work is so divided among them that each branch receives its merited attention, and with their liberal appropriations they are able to employ a sufficient number of men to thoroughly cover their territory. With the exception of Ohio, these States are among the foremost in fish culture. With the exception of New York and New Jersey, none of these States have fisheries corresponding to our commercial fisheries, and this is true of New York only to a very limited extent. On the other hand, with the exception of the shell-fish industry, we have fisheries corresponding to all those found in any of the above-mentioned States, and, in addition, the salmon fishery, which ranks second in value in the United States; consequently, our fisheries, being more extensive than any of the States whose commissions advocate the consolidating of the management of the fish and game interests, demand more attention from us than do the fisheries of these other States. Our extended coast-line, along which the fisheries are developing, and demanding more careful attention year by year, is also a factor which does not enter into the work of any of these States, except New York and New Jersey, and with them only to a limited extent. Another factor entering into this comparison of the work necessary for game protection in this and the States named, is our vast area, almost equal to all of them combined. Quoting from the report of the California Fish Commission for 1893-94:

“There is but one State which exceeds us in area; nine that have more salt-water area (gulfs, bays, sounds, etc.), and four that have more fresh-water area (lakes, rivers, etc.); but six States have more miles of developed coast-line (or main land in the direction of the ocean), and but one State—Florida—has more miles in general or straight coast-line.”

The Commission of Inland Fisheries and Game of Massachusetts deems it wiser to consolidate the management of the two interests, but from its reports we do not find that much attention is paid to game protection. They are given an appropriation of \$14,000 per annum. The other States favoring the consolidation referred to are Kansas and Utah. Both being inland States, the management of the fish and game interests

can perhaps be combined with advantage. In both these States the Fish and Game Commissioner is a salaried officer.

The Fish and Game Commission of Connecticut is allowed \$1,500 per year for salaries and expenses. They favor the consolidation of these interests. Their appropriations are all made for the propagation of fish. They say: "This State is doing substantially nothing to preserve game. It is advisable to protect the game of the State, and if not soon done there will be none to protect. This State should pay its Commissioners far better, and should make larger appropriations for the use of the Commission. \* \* \* We hope for better things at the next session."

The Vermont Fish and Game Commission, while favoring a consolidation for their State, say: "We think it depends much upon the size of the State, the amount of work expected to be done," etc. This commission has been greatly aided by the Vermont Fish and Game League, which has paid bills not legally acceptable to the State Auditor.

The New Hampshire Fish and Game Commission write: "We favor one commission in an inland State and two in a seaboard State."

Michigan has a Fish Commission and a Game and Fish Warden, and while the Fish Commission favors the placing of the administration of the fishery laws in its hands, it deems it wiser to keep the game and fish interests separated. The Commissioners say: "The propagation, distribution, and protection of game and game-fish is well enough, and is a matter to which the State may well give attention; but, in our opinion, the State is more deeply interested in the propagation, distribution, and protection of commercial fish than in anything else. Any Fish Commission which gives up its time to propagation, distribution, and protection of game and game-fish alone, is not living up to its possibilities." Michigan is fully alive to the value of this work, and shows it by appropriating \$33,200 annually for its maintenance.

Pennsylvania has a Fisheries Commission and a Game Commission, each composed of six members. The annual appropriation for the use of the Fisheries Commission is \$22,500. The Game Commission is given no appropriation. The Fish Commissioners favor the continuation of the existing conditions, and say: "In our State the fishing interests are many times more valuable than the game interests, so much so that the Fish Commission has always opposed mingling one with the other."

Maryland has maintained a Fish Commission for many years, and at the last session of the Legislature passed an Act authorizing the appointment of a game warden. He, as well as the two Fish Commissioners, are salaried officers.

In 1893 the State of Oregon appointed a fish and game protector under salary, who succeeded the Fish Commission, composed of three members. He writes: "From nearly four years' experience I have become convinced

that it would be better to separate the authority and responsibility for the enforcement of the laws for the protection of food fish from that of the protection of game."

The Fish Commissioner of Washington writes: "I do not think that the protection of fish and game should be under one Commission, for the reason that, in our State, the commercial importance of the fisheries is so great that it demands the entire attention of one Commissioner and his deputies. I think the interests of the State would be best served by keeping the commissions for the protection and fostering of fish and game entirely separate. This State makes no appropriation for the protection of its game. I am of the opinion that a sufficient amount should be appropriated to allow the game warden a fair salary for himself and deputies, and also a reasonable amount for traveling and incidental expenses."

The Iowa and Nevada Fish Commissioners both favor consolidation, and believe in the protection of game, although this subject is receiving no attention in either State. Good work, however, is being done in fish culture.

There is a division of the work in Rhode Island, and the Commissioners of Inland Fisheries advocate a continuation of this policy, believing that it "requires men of especial fitness" for each department.

Colorado has four game wardens, who receive a salary of \$1,200 per year. The Fish Commissioner also receives a salary of \$1,200 as game warden. An ex-Commissioner writes: "I think that the two branches of work should be separate. The union of the two branches interferes with each other in various ways in our State."

The Secretary of the Illinois Fish Commission writes: "Personally, I am of the opinion that the supervision of the fisheries is a work by itself, and that the enforcement of the game laws should be in the hands of an entirely different set of men. I think the best interests of the State demand that the work should be divided." Illinois has three salaried game wardens, who are charged with the enforcement of the game laws.

In reply to our question as to whether or not one Commission could supervise both interests with saving to the State, the Commissioner of Fisheries of Indiana replied: "It may be a *direct* saving to the State in money, but not in game and fish."

The President of the Game and Fish Commission of Montana says: "Under the present circumstances, with no appropriation, one commission is sufficient, but if we had an appropriation I think the interests demand separate game and fish commissions."

The Fish Commissioner and State Game and Fish Warden of Wyoming writes: "I think that the supervision of the fisheries and the enforcement of the game laws are not closely connected in this State,

and I know that the Fish Commission cannot properly attend to both. It is to the State's best interests, in my opinion, to have the work divided; each one will then receive more attention."

The Fish Commissioner of North Dakota says: "I do not think one commission can supervise both divisions with saving to the State. Its best interests, in my opinion, will be promoted by placing efficient officers at the head of the two departments."

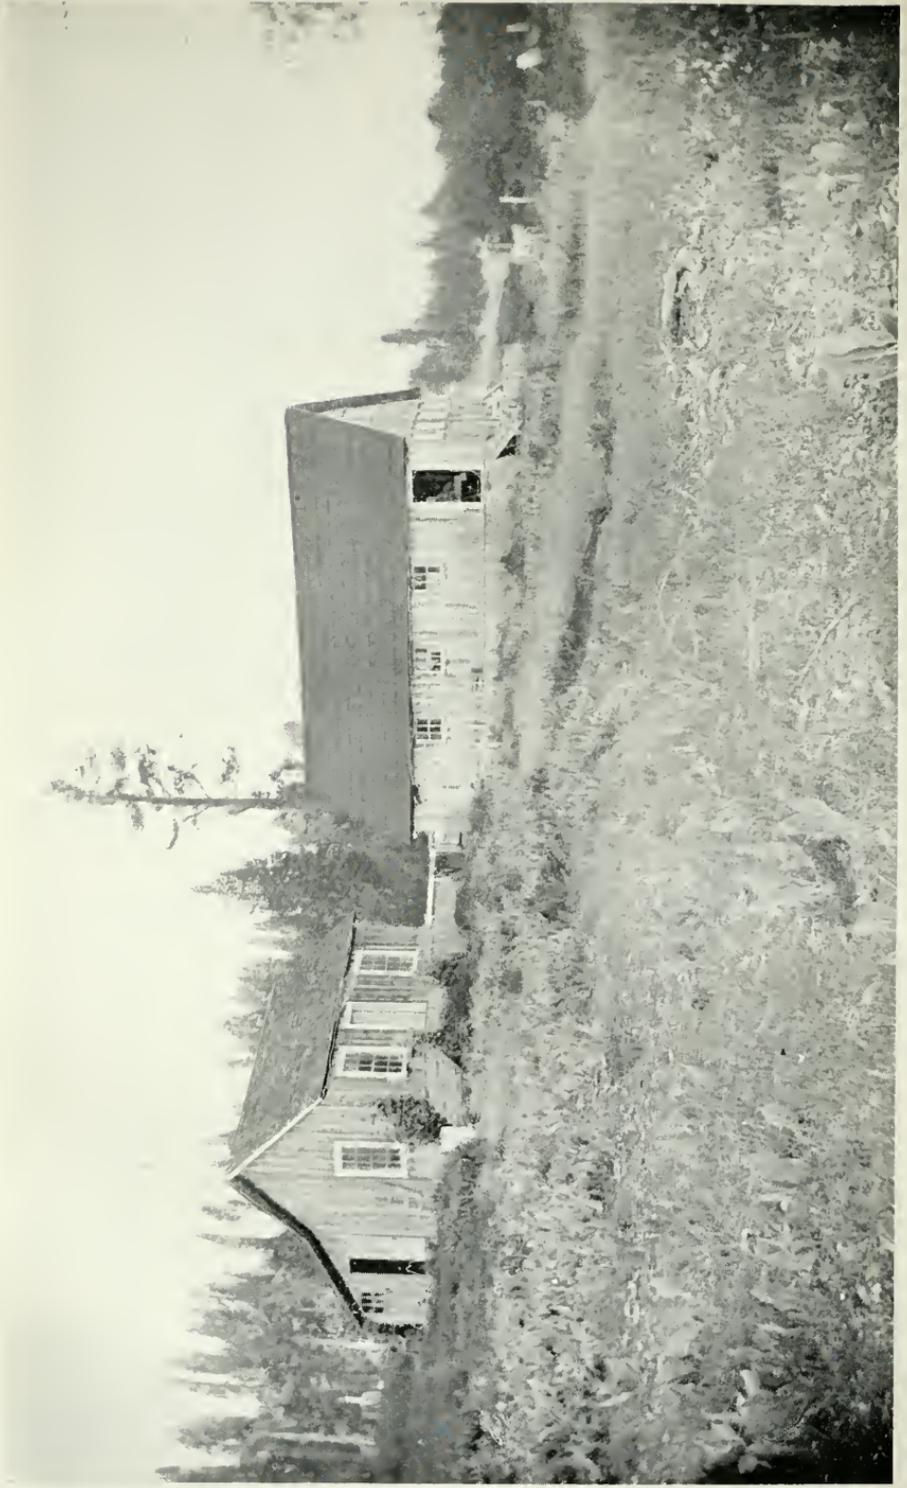

The State of Maine has divided the work by creating two commissions, that of Inland Fisheries and Game, having three members, and the Commission of Coast and Sea Fisheries, composed of one member. They each receive a salary of \$1,000 a year, with necessary expenses. The Commissioners of Inland Fisheries and Game are allotted an appropriation of \$25,000 besides, and the Commissioner of Coast and Sea Fisheries has a special appropriation for his use. The former commission appoints the necessary number of wardens, who receive \$2 per day and expenses for every day actually employed. One of the Commissioners writes: "The value of fish and game is estimated at \$3,000,000 annually. The fish are of more value to Maine than her game—twice as much, I should say. One half of our appropriation is expended in the protection of the game, which is increasing very rapidly, especially the deer, which I honestly believe are more numerous than sheep. I have been on the commission since 1872. At the start the appropriation was only \$1,200 per year; since then it has gradually increased, and to-day the fish and game is one of the first, if not *the* first interest in the State, and brings in more revenue according to the money expended than any other interest we have. What we are doing the most of at present is the stocking of new lakes with new varieties of fish."

Many of the conditions existing in this State are different from those existing in the States referred to, and for that reason we cannot pursue the policy followed by any one of them. Situated as we are, on the borders of an ocean, rich in fish beyond compare, with two great rivers emptying into large bays, and with countless lakes and streams among the mountains, we certainly have greater natural facilities for the preservation and propagation of fish than any other State in the Union.

The figures given in this report testify to the fact that the value of our fisheries, under the supervision which the State Boards of Fish Commissioners have given them, are increasing; and that, under a continuance of this policy, the State must take the rank which is properly hers and continue to build up an industry which will make returns a thousandfold.

The natural conditions of our State are also most favorable for game, and yet we are not giving the question of its preservation the attention it is receiving at the hands of most of the other States. It does not behoove the State to continue to neglect the game interests. We should

TAHOE CITY HATCHERY.—CALIFORNIA FISH COMMISSION.

rather follow the example set by other States, none of which are more favored in this regard than are we. Minnesota, Michigan, Wisconsin, New York, Maine, New Jersey, Ohio, Colorado, New Hampshire, Vermont, Maryland, Oregon, Illinois, and Wyoming are yearly giving this subject more attention and more generous appropriation. The Fish Commission of this State certainly has its hands full in attending to the commercial fisheries, without caring for the great and varied game interests. We therefore believe that it would be for the best interests of the State to give to another commission or officer the enforcement of the game and game-fish laws, and leave to the Board of Fish Commissioners only the propagation of fish and the supervision of the commercial fisheries.

We are aware of the fact that to preserve the game for the sportsman, be he local or foreign, means the turning of many dollars into the hands of our people. If for no other reason than this, we could not fail to point out to you and the Legislature the advisability of protecting our game, but it means more than this. We herewith present a statement of figures taken from the books of all the game dealers of San Francisco and Los Angeles, showing the receipts of game for the entire season by counties, and one giving them by months, for the purpose of showing the magnitude of this interest. Statements more in detail will be found in the Appendix.

TRAP—BLACKWOOD CREEK—LAKE TAHOE.

The money values here presented are the amounts received by the hunters, to which should be added the profits of the jobber and retailer.

To these figures must also be added the large amount of game which goes directly to the tables of our people, furnished by the army of sportsmen.

This amount of game is considerable as a food-supply, comprising 332,630 pounds of ducks, 37,880 pounds of quail, doves, pigeons, lark, rail, and snipe, and 175,444 pounds of geese, etc. For several reasons these figures do not represent the true commercial value of our game, chiefly because the season was such an unsettled one, and because it has been impossible to reach all of the market centers.

In recommending to your consideration, and to  
RECOMMENDATIONS. that of the Legislature, the ways and means by which our fish and game interests may best be served, we would first call your attention to the necessary appropriations for carrying on the work.

The biennial appropriation of \$20,000 for the restoration and preservation of fish and game should, in consequence of an additional appropriation for game protection, be reduced to \$15,000, and made applicable to the restoration and preservation of fish alone. A biennial appropriation of \$10,000 is needed to carry on the work as outlined in the game-warden bill recommended herein. The biennial appropriation for the support and maintenance of State hatcheries should be increased from \$15,000 to \$20,000, if the demands of our people are to be met, and suitable steps taken to import and distribute additional salt and fresh water food fishes. We would also suggest that an appropriation of \$500 be made for a scientific investigation of the Sacramento and San Joaquin rivers, with a view of ascertaining what steps are necessary to increase the run of salmon in those streams.

A form of bill creating the office of State Fish and Game Warden follows, and explains itself:

*The People of the State of California, represented in Senate and Assembly, do enact as follows :*

SECTION 1. The Governor shall appoint a suitable person to serve as State Fish and Game Warden. Said warden shall hold his office for four years, or until his successor has been appointed and qualified. The Governor shall have power to remove the State Fish and Game Warden for misconduct, incompetency, or neglect of duty, after an opportunity to be heard upon written charges. He shall receive a salary of one thousand two hundred dollars per annum, payable monthly, and shall also be reimbursed his actual expenses necessarily incurred by him while engaged in the performance of his duties, said expenses not to exceed the sum of six hundred dollars per annum.

SEC. 2. Said State Fish and Game Warden shall, before entering upon his duties, execute a bond, with sureties to the State, in the sum of two thousand dollars, for the faithful and proper performance of his duties.

SEC. 3. Said State Fish and Game Warden shall enforce the State fish and game laws in all counties, and the municipal ordinances relating to the protection of fish and game,

and he shall be vested with all the powers of a peace officer to make arrests for the violation of such laws and ordinances.

SEC. 4. Said State Fish and Game Warden shall have power to appoint deputy fish and game wardens, who shall have the same powers and authority herein provided for the State Warden himself, subject to the control and supervision of, and removal by, the State Warden. Said deputy fish and game wardens shall receive three dollars per day for each day actually spent in the discharge of their duties, and their actual expenses necessarily incurred when so employed; but the number of deputy wardens shall not exceed twelve, and the total amount allowed for compensation and expenses of deputy wardens shall not exceed two thousand eight hundred dollars per annum.

SEC. 5. Said State Fish and Game Warden shall also have power to appoint, in each county, a person to serve as County Fish and Game Warden, who shall have the same power and authority herein provided for the State Warden himself, subject to the control and supervision of, and to removal by, the State Warden. Said County Wardens may be employed by individuals, clubs, and corporations interested in the enforcement of fish and game laws, and shall receive such compensation as may be allowed and provided for by the Board of Supervisors of their respective counties. The County Fish and Game Wardens shall also receive the usual constable fees allowed by law for the arrest and conveyance of prisoners to the proper court, said demand for fees to be certified to by the District Attorney of the county in which the arrest is made, and the claim presented to the Board of Examiners of the State, and acted upon by said Board as other claims against the State are acted on, and paid in the same manner, from the appropriations for "Costs and expenses of suits for the violation of fish and game laws," etc.

SEC. 6. Each and every deputy and County Fish and Game Warden shall, upon the first day of every month, file with the State Fish and Game Warden a report of his daily official acts during the preceding month, the number of arrests made, the number of convictions, and such other information as he may deem proper. The State Fish and Game Warden shall submit a biennial report to the Governor, as required by law.

SEC. 7. All Acts and parts of Acts in conflict with this Act are hereby repealed.

SEC. 8. This Act shall take effect from and after its passage.

We recommend that Section 626*i* of the Penal Code, referring to the sale of game birds, be repealed, and the shooting and selling season be made the same. We also recommend that mountain quail and grouse be killed only between September 1st and February 15th; that doves be killed only between August 1st and January 15th.

The words "or have in his possession" should be added to the law relating to the protection of deer—Section 626*c* and Section 626*d* of the Penal Code.

The law protecting pheasants for three years should be reënacted.

We recommend adding the following words to Section 627 of the Penal Code: "Every person who shall, for the purpose of shooting any kind of wild game, conceal himself behind any living animal, shall be guilty of a misdemeanor."

If the Act providing for the appointment of a State Fish and Game Warden becomes a law, the right to issue permits for the trapping and shipping of live game birds should be given to him; and if not, to the Board of Fish Commissioners. No provision for this is now made, except in counties having wardens.

If a warden be appointed, the moneys collected as fines for violations of the game laws should be paid into the State Treasury, and constitute

a fund for the payment of expenses for propagating, protecting, and introducing game birds into the State.

Provision should be made that it shall be no defense for any person to claim that game in his possession was caught or killed outside of this State.

The following recommendations regarding additions and changes deemed necessary in the fish laws are here submitted:

A section should be added to the Penal Code, forbidding the taking of black bass except with hook and line.

The law making it a misdemeanor to sell or possess a lobster of less than one pound in weight should be changed to read " \* \* \* of less than nine and one half inches in length, measured from one extremity to the other, exclusive of legs or feelers."

Section 635, relating to the taking of fish from any pond or reservoir which has been stocked with fish, should be amended so as to enable the Commission to more fully protect the rearing-ponds near our hatcheries. This can be accomplished by adding the words "or controlled by the State Board of Fish Commissioners."

A section should be added to the Penal Code forbidding the taking of female crabs at any time.

The laws relating to the taking of trout need revision, and the following wording is suggested:

SEC. —. Every person who takes, catches, kills, offers or exposes for sale, or has in his possession any rainbow trout (*Salmo irideus*), cut-throat trout (*Salmo mykiss*), eastern brook trout (*Salvelinus fontinalis*), brown trout (*Salmo fario*), Loch Leven trout (*Salmo trutta levenensis*), Mackinaw trout (*Salvelinus namaycush*), Dolly Varden trout (*Salvelinus malma*), or any kind of trout except steelhead trout (*Salmo gairdneri*), taken in tide-water, between the first day of December and the first day of May of the following year, is guilty of a misdemeanor.

SEC. —. Every person who buys, sells, offers or exposes for sale, any steelhead trout (*Salmo gairdneri*), between the first day of December and the first day of February of the following year, is guilty of a misdemeanor.

SEC. —. Every person who buys or sells, or offers or exposes for sale, or has in his possession, any kind of trout less than six inches in length, is guilty of a misdemeanor.

SEC. —. Every person who, at any time, takes or catches any trout except with hook and line, is guilty of a misdemeanor; *provided, however*, that steelhead trout (*Salmo gairdneri*) may be taken in tidewater between the first day of February and the first day of May, with lawful nets. A lawful net shall be considered a net that, when placed in the water, is unsecured and free to float with the current or tide, and the meshes of which are, when drawn closely together and measured inside the knot, not less than seven and one half inches in length.

It should be made a felony to use any explosive for the taking or killing of fish. Under the present law it is made a misdemeanor, and the punishment does not fit the crime.

The netting of fish in any stream upon which is located a State hatchery should be forbidden. A law to this effect already gives protection to United States hatcheries.

We recommend adding to the laws relating to the protection of sal-

mon an amendment to the effect that the plea of fishing for other kinds of fish will not constitute a defense, for the reason that such plea is often successfully interposed in a trial before a jury.

We also suggest that a law be enacted making it no defense, in any action, to contend that the fish were caught or taken outside the State.

The enforcement of the laws governing the commercial fisheries should be left with the Fish Commission, and not made a part of the duties of the Fish and Game Warden. All moneys collected as fines for the violations of the fish laws should be paid into the Fish Commission Fund.

The law for the prevention of the dumping of deleterious substances into State waters, which now reads, "Every person who places or allows to pass into any waters of the State any lime," etc., should be amended and made to read, "Every person who places or allows to pass, or *who places where it can pass*, into any of the waters," etc.

Some minor changes in the wording of the different sections pertaining to fish or game, which will make the filing of complaints and the prosecution of offenders less difficult, have been submitted to the Code Commissioners for their consideration.

If the Legislature deem it wise to follow out these suggestions, we are confident that the path of the poacher will be seriously obstructed, and the interests of both fish and game greatly benefited.

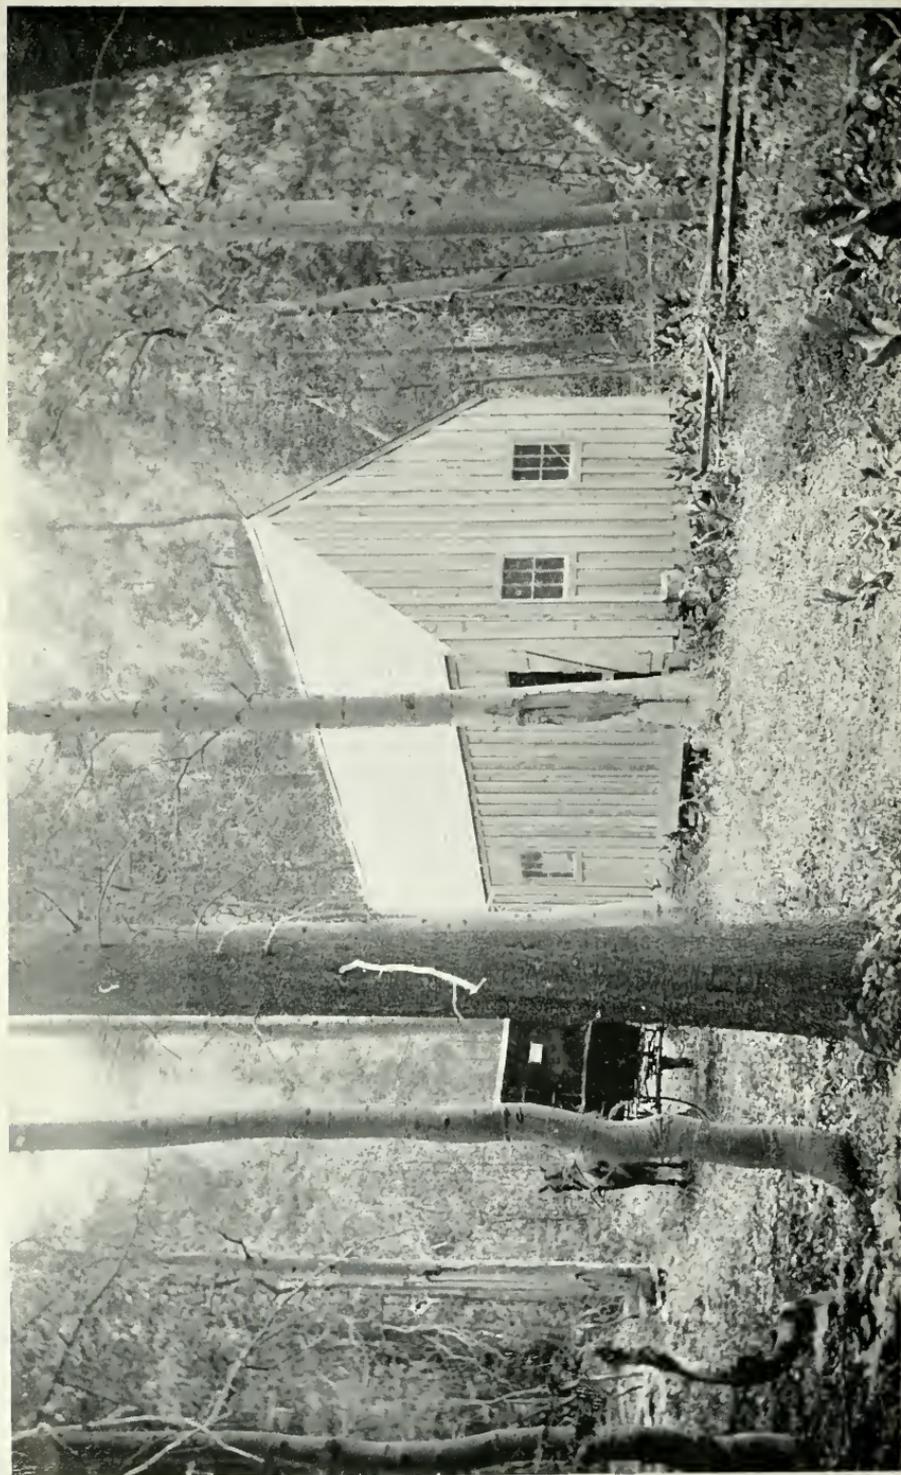

So many courtesies and kindnesses have been  
**ACKNOWLEDGMENTS.** shown your Commission by the people of our State that we feel under great obligations to them, and would be glad to make acknowledgment individually, did space permit. We desire specially to acknowledge the donation of fish and eggs from the United States Commission of Fish and Fisheries, and the kindly disposition shown to aid us in every way to increase the productiveness of California waters. We are also indebted to them for various statistics inserted in the pages of this report.

Our thanks are due the various railroads of the State for the free transportation of fish and men accorded us; for without this courtesy it would have been impossible for us to have accomplished what we have. We also express our thanks to their employés, who have aided our men in many ways.

We have been obliged to call upon Attorney-General Fitzgerald many times for opinions upon various subjects, and for aid in prosecuting various offenders against the fish and game laws. He has at all times met our demands upon his time with promptness, and given us every assistance in his power, and we extend to him and his assistants our hearty thanks.

Messrs. Washburn and M. Lawrence & Co. have merited our gratitude for the various kindnesses extended our men, and deserve the

TALLAC HATCHERY.—CALIFORNIA FISH COMMISSION.

thanks of our people for their generous actions in assisting us in our work in their localities.

Our thanks are due to the officers stationed in the Yosemite National Park for courtesies extended, and especially to Col. S. B. M. Young, Capt. Alex. Rodgers, Lieuts. H. C. Benson, J. M. Neall, S. McP. Rutherford, Fourth Cavalry, U. S. A., and Lieut. N. F. McClure, Fifth Cavalry, U. S. A., and the men of their commands.

We desire to thank the Sacramento River Packers Association and the Carquinez Packing Company for the substantial aid given us in the erection of the Battle Creek hatchery. We have also received various statistics from them.

To Mr. F. R. Lowe we extend thanks for his kindness in furthering the success of the Battle Creek station by giving us the use of such land as was necessary.

We are indebted to the San Diego Flume Company, the Benicia Water Company, and Mr. James L. Flood for allowing us to take fish for stocking purposes from waters controlled by them.

Our thanks are due Drs. David Starr Jordan and Charles H. Gilbert, of Stanford University, for their services in the classification of fishes and other matters where they have been called upon to aid us. Dr. Gilbert has about completed an examination of our waters, the result of which we had hoped to be able to include in this report.

We have received substantial aid from the various clubs interested in furthering the fish and game interests throughout the State, and especially from the Visalia Sportsmen's Association, Humboldt County Fish and Game Club, Gilroy Sportsmen's Association, Tule River Hunting and Fishing Association, the Salinas Gun Club, and the Sierra Nevada Sportsmen's Club.

We desire to thank the following market dealers for their kindness in allowing our deputies to take various figures of the receipts of fish and game from their books: American Union Fish Co., A. Paladini, G. Camilloni & Co., J. Kessing & Co., Pacific Coast Fish Co., B. Caito, Milani & Co., Pioneer Fish Co., S. Tarantino & Co., Fabris & Rivola, Vegilio, A. Parmisano, A. Bellanti, Campodonico-Malcolm Co., A. L. B. Immel & Co., H. Heckman & Co., L. Scatena & Co., C. Nauman & Co., J. Miller & Co., L. Dolheguy & Co., B. G. Ruhl & Co., J. H. Cain & Co., B. Miller, Compagno & Co., S. Levy & Co., L. Dallman & Co., Leon & Co., O'Brien & Sportorno, Lemoine & Co., D. E. Allison & Co., and A. Fodera, of San Francisco; Haniman Fish Co., Morgan Oyster Co., San Pedro Fish Co., Standard Fish Co., Ferraris Bros., and Pacific Coast Fish Co., of Los Angeles.

We believe that the best interests of the people have been promoted in the matters by law entrusted to us during the last two years, and we trust that the work so well inaugurated will, under the revised laws

and increased appropriations which the Legislature should grant, be carried forward until our fishery industry is as productive as the possibilities warrant.

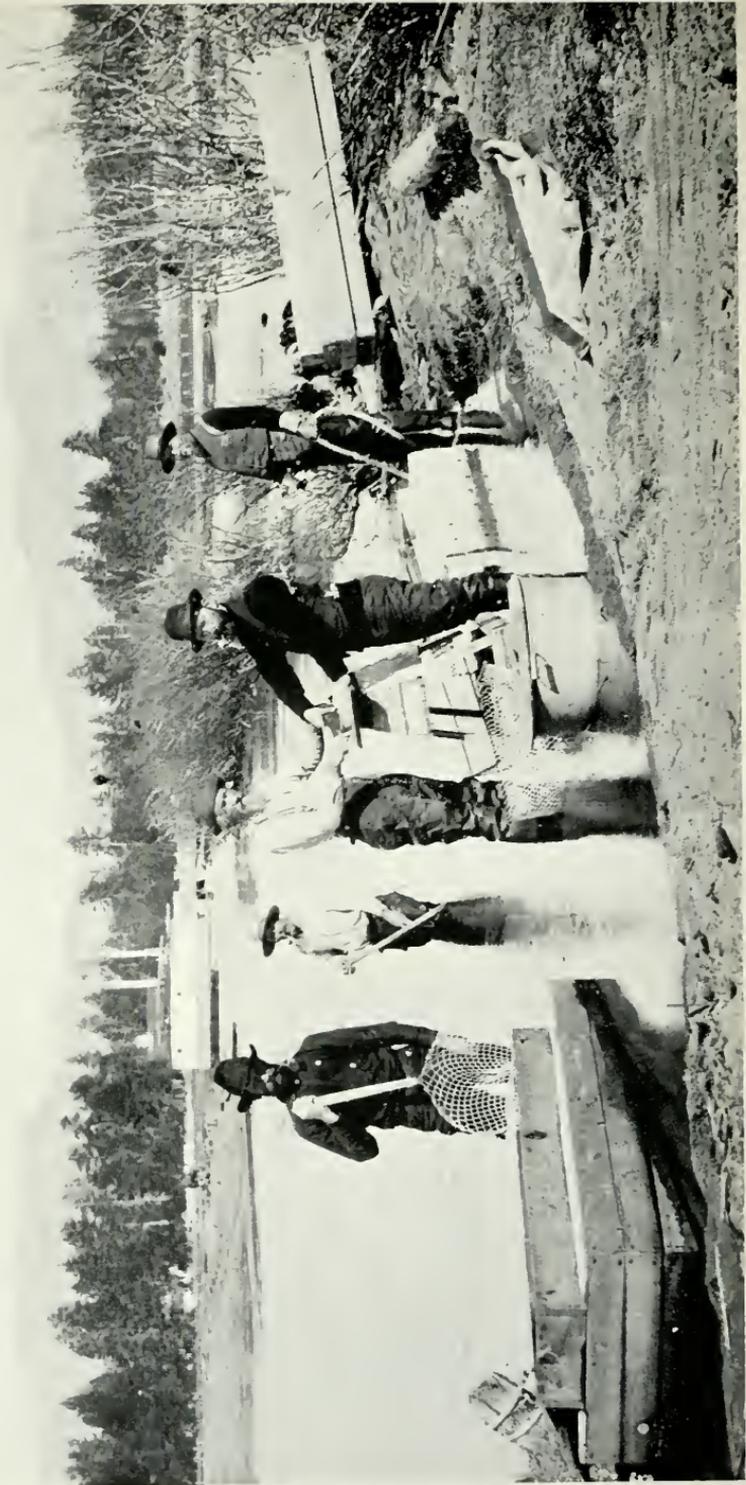

We desire to express the pleasure we have experienced in the confidence you have shown in us, as also in serving under your administration.

Yours respectfully,

WM. C. MURDOCH,  
H. F. EMERIC,  
Commissioners.

SAN FRANCISCO, September 1, 1896.

TAKING SPAWN.—TAYLOR CREEK—LAKE TAHOE.

GERMAN BROWN TROUT.—*Salmo fario*.

## IN THE MATTER OF DUMPING SAWDUST INTO TRUCKEE RIVER.

BRIEF ON BEHALF OF THE PEOPLE OF THE STATE OF CALIFORNIA.

In the Supreme Court of the State of California.

THE PEOPLE OF THE STATE OF CALIFORNIA, upon the  
Information of W. F. FITZGERALD, Attorney-General of said  
State, *Respondent*,

vs.

THE TRUCKEE LUMBER COMPANY (a corporation), *Appellant*.

This action is brought by the People of the State of California, upon information of W. F. Fitzgerald, Attorney-General, against defendant, to restrain it from committing a nuisance by placing and allowing to pass into the Truckee River, a stream of fresh water, stocked with fish, large quantities of sawdust, shavings, slabs, edgings, and other waste from its sawmill and box factory, situated upon said river, which it is alleged pollutes the water thereof and makes it unfit for use, and that said substances are poisonous to and kill and destroy the fish in said river.

At the time of filing the complaint, the Court granted a temporary injunction, restraining defendant from the commission of the acts complained of. Defendant interposed a demurrer to the complaint, and moved a dissolution of the injunction.

Upon hearing of the motion, the Court overruled the demurrer, and denied defendant's motion to dissolve the injunction.

This appeal is prosecuted from the order refusing to dissolve the injunction.

The points made by appellant may be summed up as follows:

First—That the facts alleged in the complaint do not constitute a public nuisance;

Second—That injunction is not the proper remedy;

Third—That the Attorney-General has no authority in law to maintain this action in the name of the People;

Fourth—That the protection of fish is exclusively entrusted to the Fish Commissioners and the criminal courts.

We will treat the first point mentioned from two points of view:

First—That the general public has a property interest in the fisheries of the State, and that the State is trustee for the people;

Second—That the owner of the soil has a special property in fish so long as they are in the water that flows over his land.

*First*—Right of fishery in the public.

(A) The principle involved here is the same as that which existed under the common law of England.

By the common law, all fish within the waters of the realm and all animals *feræ naturæ* belong to the King. The right of taking game, and free fishery, was a royal privilege—a franchise granted by the King to certain of his subjects.

The reason of this law was, that the King is the ultimate proprietor of all the lands in the kingdom; they being all held of him as the chief lord, or lord paramount of the fee; and that, therefore, he had the right of the universal soil, to enter thereon, and to chase and take such creatures at his pleasure; and also upon another maxim of the common law: that these animals are *bona vacantia*, and, having no other owner, belong to the King by his prerogative. (Blackstone's Com., Book II, pp. \*39, \*40, \*415.)

The right of fishery as a prerogative is upon the same principle just cited.

The law of this country, so far as the principles involved in this case are concerned, is the same as the common law, to wit: that the original proprietorship of fish, and the right of fishery, are in the sovereignty of the States—the people themselves, who hold the fisheries in trust for the use of the public.

The sovereign power in the United States is in the people. (*Moore vs. Snow*, 17 Cal. 200; *Chisholm vs. Georgia*, 2 Dall. (A. S. Sup. C.), 471.)

Where the right of fishery existed in the King under the common law, that right exists in the people of the United States, and they, in their sovereign power, have the right to regulate the manner and method by which fish shall be taken, and may even prohibit the catching entirely, if they so elect, or may do any act in reference thereto.

From the earliest organization of our State government, the right to regulate and control the fisheries of the State was assumed by the Legislature, and this right has not, we think, been questioned.

As early as 1854, the Legislature passed an Act for the preservation of fish (salmon), declaring any weir, dam, or obstruction in any bay, strait, river, stream, creek, or slough of this State *to be a nuisance*. (Statutes 1854, p. 122.)

From that time down to the present, the Legislature has passed numerous Acts all tending to the preservation of fish within the State. Not only has the Legislature passed laws to protect the fish with which the streams were already stocked, but also large sums of public money have been expended in propagating fish and stocking the fresh-water streams of the State.

This right of control over the fisheries of the State by the Legislature is a recognition of the State's proprietary interest in and to the fish within its streams. If the authority vests in the State to enact laws for the preservation of the fish; if it can prohibit fishing in whole or in part; if it can expend public revenues for the propagation of fish, it is a recognition of the proprietary interest of the State in and to the fisheries.

It is obvious that anything which would injure or damage this proprietary interest of the State above set forth, and, as in this case, totally destroy the property, would be a *public nuisance*.

(B) The State holds the fisheries within its territory in trust for the public.

The State in its sovereign power holds the legal title to all fisheries within its borders in trust for the people. This is true as to the unnavigable as well as the navigable streams.

The same principle obtains as in the case of streams and the shores to high-water mark.

"Navigable streams and the shores to ordinary high-water mark are held by the State in trust for the public." (*Heckman vs. Street*, 99 Cal. 309-10.)

On the same principle, the State holds all highways, streets, etc., in trust for the people.

A trustee is a party in interest, and may maintain an action for an infraction of the rights of a beneficiary or damage to the property held in trust. (Section 369, Code of Civil Procedure; *Winters vs. Rush*, 34 Cal. 136; *Tyler vs. Houghton*, 25 Cal. 29; *West vs. Crawford*, 80 Cal. 19; *Walker vs. McCusker*, 71 Cal. 594; *Anson vs. Townsend*, 73 Cal. 419.)

*Second*—The owner of the soil has a special property in fish while in the water which flows over his land, and damage to or deprivation of that property right would be a nuisance, and, if affecting a number of persons, would constitute a *public nuisance*.

In order to constitute a public nuisance, it is not necessary to affect every person within the State, *but any considerable number of persons*.

Section 3480 of the Civil Code defines a public nuisance as one which affects an entire community—a neighborhood or *any considerable number of persons*.

In this case counsel concede that the acts complained of affect all owners of the soil along the stream, and as the complaint alleges the acts to be a public nuisance, and the complaint must be taken as true on this motion, it necessarily follows that a *considerable number of persons are affected*.

If the owners along the stream have a special property in the fish while in the water on their land, then the acts of the defendant con-

stitute a public nuisance, it affecting a *considerable number of persons*. (See the case of *People vs. Elk M. & L. Co.*, 107 Cal., p. 219.)

That was an action to restrain the defendant from causing a public nuisance by allowing waste, sawdust, etc., from its sawmill to pass into the stream, which polluted its waters. The Court say:

"The Court found that Elk River is not a navigable stream. It is contended that it follows from that fact that fouling its waters cannot constitute a public nuisance. But it is found that the waters of Elk River, at and below defendant's dam, were, and have been, and now are used by a considerable number of persons who resided along the banks of said stream below the defendant's mill and dam. This constitutes such a public use as would make a pollution of water by any unreasonable use, a public nuisance."

THE DEFINITION IN THE CODE IS NOT EXCLUSIVE OF WHAT CONSTITUTES  
A PUBLIC NUISANCE.

Counsel assume that the Code has not defined the act complained of in this action to be a public nuisance and because it has not done so, or because the common law is silent upon the subject, that, therefore, it is *not* a nuisance.

We answer this in two ways:

*First*—The acts alleged in the complaint come clearly within the definition of a public nuisance in Sections 3479 and 3480 of the Civil Code.

Section 3479, C. C., says: "Anything which is injurious to health, or is indecent or offensive to the senses, or *an obstruction to the free use of property*, \* \* \* is a nuisance."

Section 3480, C. C., says: "A public nuisance is one which affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal."

What could be more explicit or applicable to the case at bar than this definition? The State, as has been shown, has a property interest in the fisheries within its borders, and the owners of the soil a right of property in the fish.

Defendant, by placing certain poisonous and deleterious substances in the Truckee River, is totally destroying the fish therein—the property of the plaintiff. This is not only "*an obstruction to the free use of the property*," but is more—a destruction of the property itself. It cannot be maintained that a total destruction of property is not an obstruction to the free use of the property. As to what constitutes a considerable number of persons, see case of *People vs. Elk M. & L. Co.*, 107 Cal. 219.

*Second*—That, even though the acts complained of do not come within the definition of nuisance in the Code, yet the Code is not exclusive.

In other words, an act may constitute a nuisance, though not specifically defined to be such by the Code.

Following are some general definitions of nuisance:

“Nuisance, *nocumentum*, or annoyance, signifies anything that worketh hurt, inconvenience, or damage; and nuisances are of two kinds: public, or common nuisances, which affect the public, and are an annoyance to all the King’s subjects.” \* \* \* (Blackstone’s Commentaries, Book III, star page 216.)

“The term in legal phraseology is applied to that class of wrongs that arise from the unreasonable, unwarrantable, or unlawful use by a person of his own property, real or personal, or from his own improper conduct, working an obstruction of or injury to the right of another or of the public, and producing such material annoyance, inconvenience, discomfort, or hurt, that the law will presume a consequent damage.” (Am. & Eng. En. of Law, Vol. 16, p. 924.)

Indeed, so numerous are the acts which might, under certain circumstances, constitute a nuisance, that it would be impossible for the statute to enumerate the same.

In the Am. & Eng. En. of Law (Vol. 16, p. 943), it is said “the variety of things, acts, and omissions which may constitute a nuisance is so great as to render an enumeration impossible; no particular combination of sources of annoyance being necessary to constitute a nuisance, and the possible sources of annoyances not being exhaustively defined by any rule of law.”

Mr. Wood, in his work, aptly states the case, viz.:

“The question is not whether an act has been declared to be, but does it come within the idea of, a nuisance? If so, it is a nuisance, though never before held so; if not, it is not a nuisance, though held so in a thousand instances before.” (Wood on Nuisances (3d ed.), Vol. I, Section 27.)

Counsel lay great stress upon the fact that there is a difference between navigable and unnavigable streams. We do not see that it makes any difference to the determination of this case.

If a dam or other obstruction should be placed in a stream, preventing fish from going up the stream, it would be a nuisance to the public. Why? Because it would prevent the fish from going to their spawning-grounds, and eventually exterminate them; because it would be depriving others of their property rights—the rights appendent to their lands—the fisheries thereon. It would deprive the riparian owner of his right to acquire property. Precisely the same principle is involved in this case. The result of respondent’s acts is the total destruction of all fish in the stream below its mill, if not in the entire stream. This directly affects the public and deprives all persons on the stream below it of a vested property right.

A fishing privilege is a valuable consideration in addition to other riparian rights, and we ask what authority defendant has to so use its property that it may destroy the valuable rights and privileges of other persons? It could not do so with reference to any other species of property, and we know of no reason why it should be permitted to do so in this case.

It is a well-established principle of law that an owner of property must not use it, even in a lawful business, in such a manner as to interfere with another in the legitimate use of its property. (*Tuebner vs. California Street Railway Co.*, 66 Cal. 171.)

Suppose defendant, instead of placing the sawdust and refuse in the river and destroying the fish, had placed the same upon the land of other persons, we think it would not be seriously contended by counsel that such would not be a nuisance. The principle involved is no different in placing the same in a stream of pure water and killing the fish therein. In the instance cited, a nuisance is created, because it is a damage to property (his land), and obstructs the use of the same. In the case at bar, it is a nuisance because it is a damage to property rights (fishery).

#### REMEDY—INJUNCTION WILL LIE.

Counsel contend that, because the Penal Code has made the acts complained of a misdemeanor, a suit in a court of equity will not lie. This contention is not well founded.

The mere fact that the statute makes a certain act a penal offense does not necessarily remove the case from the jurisdiction of a court of equity. The question to be determined is one of fact.

If the acts complained of constitute a nuisance in fact, equity will interpose to abate the further continuance of the same.

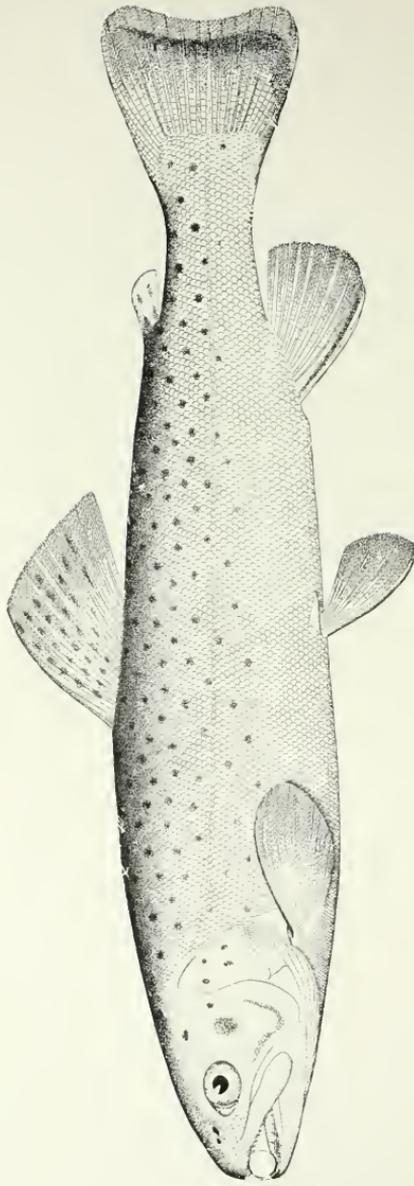

Section 3491 of the Civil Code provides: "That the remedies against a public nuisance are: (1) Indictment or information; (2) A civil action; (3) Abatement."

The courts of this State have decided the question several times. (See *Yolo Co. vs. City of Sacramento*, 36 Cal. 193; *People vs. Davidson*, 30 Cal. 380; *People vs. Gold Run D. & M. Co.*, 66 Cal. 150; Vol. 16 Am. & Eng. En. of Law, p. 940, and authorities there cited; Story on Equity Jurisprudence, Sections 921-3-4.)

In the case of *People vs. Gold Run D. & M. Co.*, *supra*, the Court hold: "Whenever an indictable nuisance exists there is a coördinate remedy in equity to abate it by injunction."

In the case of *Yolo County vs. City of Sacramento*, *supra*, the Court say: "If the dam is an obstruction to navigation, it is so far a public nuisance, for which the plaintiff cannot have a private action. In such cases the remedy is by indictment against the parties by whom the dam

LOCH LEVEN TROUT.—*Salmo trutta lecnensis*.

was built; \* \* \* or, perhaps, if the remedy is inadequate—that is to say, if there is imminent danger of irreparable mischief before the tardiness of the law can afford relief—equity may interpose and abate the nuisance upon the information of the Attorney-General.”

In the Am. & Eng. En. of Law, cited *supra*, it is stated that: “The remedies for injuries or offenses of this character (nuisance and purprestures) are by indictment; by proceedings at law known as an information of intrusion, resulting in *abatement*; and also in *proceedings in equity for abatement and injunction on information of the Attorney-General*, and sometimes, but not usually or necessarily, at the relation of a private person.”

Again, Story gives the law as follows (cited *supra*): “In regard to public nuisances, the jurisdiction of courts of equity seems to be of a very ancient date, and has been distinctly traced back to the reign of Queen Elizabeth. The jurisprudence is applicable not only to public nuisances, strictly so called, but also to purprestures upon public rights and property. \* \* \* In cases of public nuisances, properly so called, an indictment lies to abate them, and to punish the offenders. *But an information also lies in equity to redress the grievance by way of injunction.*” \* \* \* [The italics are by us.] “The ground of this jurisdiction by courts of equity in case of purpresture as well as of *public nuisances*, undoubtedly is their ability to give a more complete and perfect remedy than is attainable at law, in order to prevent irreparable mischief, and also to suppress oppressive and vexatious litigations. In the first place, they can interpose where the courts of law cannot to restrain and prevent such nuisances which are threatened or in progress, as well as to abate those already existing. In the next place, by a perpetual injunction, the remedy is made complete through all future time; whereas, an information or indictment at the common law can only dispose of the present nuisance; and for future acts new prosecutions must be brought. In the next place, the remedial justice in equity may be prompt and immediate, before irreparable mischief is done; whereas, at law nothing can be done, except after a trial and upon the award of judgment. In the next place, a court of equity will not only interfere upon the information of the Attorney-General, but also upon the application of private parties directly affected by the nuisance.”

In such a case as this the two jurisdictions do not conflict. The law side of the court may be invoked in cases of past transgressions of the public's rights; the equity side exercises its jurisdiction to prevent future transgressions. Upon the law side of the court, an action will not lie until the injury is done. Equity will interpose to prevent the injury—the jurisdiction of the one operates upon past actions; the jurisdiction of the other extends over future actions.

The complaint in this action shows that respondent is placing refuse

timber from its sawmill and box factory in the Truckee River, which poisons the fish, and that unless restrained all the fish in the river will be wholly exterminated.

It would be a poor commentary upon the efficiency of our law, if, in such a case as this, we are refused a preventive remedy, and compelled to wait until all the fish shall have been killed—all the injury done—before the law will act.

Furthermore, in order to show that a civil remedy may be invoked in the case of public nuisance, where the commission of the same is made a penal offense, we call the Court's attention to the Penal and Civil Codes. Sections 370-1 of the Penal Code are substantially the same as Sections 3479 and 3480 of the Civil Code. Yet, notwithstanding the fact that the Penal Code makes the acts stated therein a penal offense, the Legislature has by the Civil Code given a civil remedy for the same wrongful acts, demonstrating conclusively that a civil remedy may be invoked, notwithstanding the fact that a criminal action will lie.

A criminal action is no bar to a civil suit. (Section 618 of Wharton's Criminal Law, and cases cited.)

#### FISH COMMISSION HAS NO AUTHORITY TO ABATE A NUISANCE.

Counsel say that "the protection of fish in private streams is exclusively entrusted to the Fish Commissioners and the criminal courts."

We insist, first, that the Truckee River is not a private stream. It is one of the public rivers of this State.

It is a sufficient answer to this contention to say that no authority is given to the Fish Commissioners to abate a nuisance.

Their duties are to see that the laws for the preservation of fish and game are enforced. They have no other powers to this end than to invoke the aid of the courts. The Commissioners cannot judge of the guilt or punish offenders for the violation of the game and fish laws.

The authorities cited by counsel in support of their contention, is where a specific, sufficient, and adequate remedy is provided by statute, in which case such remedy is held exclusive.

Such is the law in this State in reference to matters where a plain and adequate remedy is provided. But the remedy must be sufficient and adequate to make it exclusive. In this case the Fish Commission can grant no relief—they can furnish no remedy whatever. Their only function in this regard is to see that the laws are enforced—not to enforce them themselves.

THE ATTORNEY-GENERAL IS AUTHORIZED TO MAINTAIN ACTIONS OF THIS CHARACTER IN THE NAME OF THE PEOPLE.

The People is the proper party on the complaint of the Attorney-General. (*People vs. Davidson*, 30 Cal. 388; *People vs. Gold Run, etc., Co.*, 66 Cal. 138, 56 Am. Rep. 80; *People vs. Pope*, 53 Cal. 437; *People vs. Blake*, 60 Cal., 497; *People vs. Reed*, 81 Cal. 70, Am. St. Rep. 22; *People vs. Hibernia Sav., etc., Society*, 84 Cal. 634; *People vs. Elk River M. & L. Co.*, 107 Cal. 215; *People vs. Beaudry*, 91 Cal. 220.)

The above are a few of the cases reported where actions have been brought in the name of the people to abate and restrain nuisances.

In the case of *A. G. vs. Shrewsbury Bridge Co.* (Eng. case), 21 C. D. 752, held, that where an illegal act is being committed, which in its nature tends to the damage of the public, the Attorney-General can maintain an action on behalf of the public to restrain the commission of the act without adducing any evidence of actual damage to the public; and the Court accordingly granted an injunction with costs, though no evidence of actual damage was given. (Brice on *Ultra Vires* (3d ed.), p. 761.)

Counsel attempts to draw a distinction between the Attorney-General bringing a suit in the name of the people on his own information and in bringing it on the relation of a private person.

There is no difference in its legal effect. The People is the party plaintiff and not the relator. The reason stated by counsel in their brief, to wit: that costs and expenses of suits could not be recovered against the State in case defendant was successful in such suit, and that by having a relator he would be responsible for costs, is not well founded. The State is liable for costs awarded against it, the same as a private individual.

The only object attained by bringing an action on the relation of a private person, is that the parties directly interested may be required to give the State security for costs; the bond is a protection to the State, not to the defendant.

Counsel seem to be under a misapprehension of the law in reference to security to the defendant afforded by a bond, according to their statement on page 22 of their brief.

The bond that may be required by the Attorney-General is simply for costs of suit—not for damages that may result by reason of the injunction. A relator would not be liable for such damages.

The authorities cited by counsel are not law now. The State and counties may be sued under existing statutes which make these decisions inapplicable to the case at bar.

To summarize upon this point, we state our former proposition that this is a public nuisance, and in either event—

First—If the State is the trustee of the fisheries within its borders, and the defendant is committing an unlawful act in destroying the same, the State, as such trustee, may maintain this action on complaint of the Attorney-General;

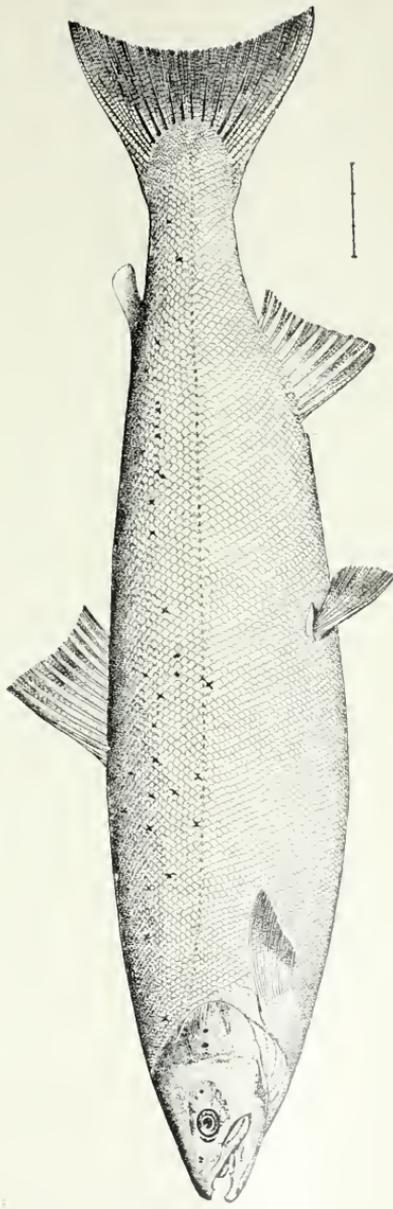

Second—If the riparian owners along this stream have a special property in the fish while in the waters on their land, the unlawful act of defendant is such an injury to their property rights as to constitute a public nuisance, and the People is the proper party in an action to abate the same.

We believe that it will not cause defendant any great injury or inconvenience to so arrange its mill and box factory as not to place the refuse, etc., in the river. We will close by using the language of the Court in the case of *Tuebner vs. California Street Railway Co.*, 66 Cal. 174, in which they say: "If the business be necessary or useful, it is always presumable that there is a proper place and a proper manner for carrying it on"; and we think in this case that no injustice will be done by restraining defendant from its unlawful act; but, on the contrary, if permitted to continue, great injustice and damage will be done to the public.

We respectfully submit that the judgment denying defendant's motion to dissolve the injunction should be affirmed.

W. F. FITZGERALD,  
Attorney-General, and  
HENRY E. CARTER,  
Deputy Attorney-General,  
Attorneys for Respondent.

SAN FRANCISCO, May 15, 1896.
